Acknowledgements

The NWT Healthy Foods in Facilities Working Group consists of representatives from the eight Health and Social Services Authorities and the Department of Health and Social Services. The working group has also benefited from participation from representatives from the Department of Education, Culture and Employment.

The Working Group adapted these Guidelines with the permission of Lisa Forster-Coull, Provincial Nutritionist, British Columbia Ministry of Health. The draft policy information was adapted from a New Brunswick Department of Education School Food Policy.
Message from the Minister

The following Guidelines for Healthy Foods in Facilities are the result of the hard work of several individuals from the eight Health and Social Services Authorities in the NWT as well as the Department of Health and Social Services.

These Guidelines provide helpful direction for the kinds of foods and beverages the staff, patients and the public can expect to see in their health and social services facilities. These Guidelines mirror the direction of the department and recommendations of health care professionals in promoting healthy eating habits.

J. Michael Miltenberger
Minister of Health and Social Services

Healthy Foods in Facilities

Raspberries
Caribou hamburger
Mixed berry bannock
Background

Through a collaborative process, the Department of Health and Social Services, Government of the Northwest Territories, and all NWT Health and Social Services Authorities, jointly developed and approved these Healthy Foods and Beverage Guidelines. These guidelines provide a basis for a common definition and approach for the promotion and selection of foods considered for use in health and social services facilities.

The Guidelines are adapted from the extensive work done in British Columbia by the Ministries of Health and Education, although many other documents and references were also reviewed as part of the development process. The working group did not find consistent guidelines or policies throughout Canada or the United States, however, the Guidelines from British Columbia were considered among the most comprehensive. Adaptations for the Northwest Territories consisted mainly of the recognition of commonly used and traditional foods. The criteria used by BC in terms of categorizing foods remained largely the same, since it is based on several years of work involving categorizing individual foods into appropriate groupings according to nutrient content. The guidelines are intended to be generic to the extent that they could be used for any health and social services facility.

Thirteen food categories outline a range of foods from those not recommended to those that provide nutrients needed for good health. These categories are located on pages 7-18.

Work on these guidelines began in the spring of 2005, following a directive from the Minister of Health and Social Services, GNWT. The goals of the Department and the Health and Social Services Authorities are supported by this initiative as it helps to create an environment for selecting from a range of healthy food choices provided or sold at publicly funded health and social services facilities. From the fall of 2005 to the spring of 2006, several Working Group teleconference meetings were used to discuss issues, review and research similar guidelines and/or information in other jurisdictions, resulting in the implementation of these guidelines.

The working group also saw the use of these Guidelines as a means to address some issues reported in the NWT Health Facilities Survey, for example:
· a need for more fruits and vegetables;
· a need for more country and healthier food choices; and,
· a need for more variety, quantity and tastier food to be served in health and social services facilities.

Thus, these Guidelines are a first step in the continued collaboration for the promotion of healthy choices as outlined in the Healthy Choices Framework, where Healthy Eating is identified as one of several priorities.
Creating Healthy Environments for Healthy Eating – an Upstream Approach

Although data on the nutritional status of northerners is limited, the relationship between food intake, nutrition and health status is well documented\(^6\). The 2005 NWT Health Status Report and other data sources indicate the following:

- In 2003, 66% of NWT residents 12 years of age and older did not meet the food guide recommendations for healthy eating as reported through consumption of fruits and vegetables - these residents reported consumption of less than the minimum serving of 5 fruits and vegetables per day.\(^7\)

- The World Health Organization has recognized the rise in obesity rates as a worldwide epidemic requiring immediate action. Overweight and obese adults in Canada are at a 1.5 to 10 times greater risk for diabetes.\(^6\)

- Dental disease is prominent in the Northwest Territories. There are more than 300 children on waiting lists for dental surgery.\(^8\) Between 1970 and 1997 in the US, per capita consumption of carbonated soft drinks increased 118%; and, it is estimated that the average teenager consumes 65 gallons of carbonated beverages per year.\(^9\)
Application of the Guidelines

These guidelines apply to foods and beverages provided in most health and social services facilities, including vending machines, cafeterias, meetings and special events. The Guidelines are intended to provide the nutritional rationale for the foods recommended and to support broader policies around healthy eating. Foods and beverages in the 13 categories are divided into four categories, ranging from a not recommended category, to a choose most category – as follows:

<table>
<thead>
<tr>
<th>Not Recommended</th>
<th>Choose Least</th>
<th>Choose Sometimes</th>
<th>Choose Most</th>
</tr>
</thead>
<tbody>
<tr>
<td>These items include candies and drinks where sugar is the first ingredient or the second ingredient after water. These foods tend to be highly processed or have very high amounts of sweeteners, salt, fat, trans fat or calories relative to their nutritional value.</td>
<td>These items include foods that are deep-fried, low in key nutrients (such as iron and calcium), are highly salted, sweetened or processed. These foods could make up 10% or less of food choices available in facilities.</td>
<td>These items include foods such as fruit canned in light syrup and represent choices that are moderately salted, sweetened or processed. They would account for 40 - 50% of foods and beverages in facilities.</td>
<td>These items include whole grain breads and fresh vegetables. These foods tend to be the highest in nutrients, the lowest in unhealthy ingredients, and the least processed. They would account for 50% or more of foods and beverages in facilities.</td>
</tr>
</tbody>
</table>
Along with general information and examples, the guidelines provide detailed nutrition criteria to clarify why specific foods are grouped into the four categories.

It should be noted that many processed foods might actually fit in any of the four categories, depending on their nutritional value. For example:

- Foods with 5 grams of fat or less and/or less than 150 mg of sodium per serving would be found in the Choose Most category, consistent with recommendations in the NWT or Canada’s Food Guide to Healthy Eating, which emphasizes whole grains and lightly salted or unsweetened foods;
- Foods with 5 - 10 grams of fat and/or between 150-300 mg of sodium, would be in the Choose Sometimes category because they are moderately salted and processed;
- Foods with 10 - 15 grams of fat and/or between 300-600 mg of sodium, would be in the Choose Least category because they are highly salted and/or high in fat; and,
- Foods with more than 0.2 g of trans fats and/or with more than 15 grams of fat or 600 mg of sodium would be in the Not Recommended category.
- In addition, foods with a Health Check symbol are usually considered to be in the Choose Most and Choose Often categories.

Creating Awareness and Next Steps

In an effort to assist in making informed choices about nutrition, a first step was the creation of an initial awareness of Healthy Choices through two promotional materials – Posters and Table Tents, which were distributed to all Health and Social Service Authorities and the Department of Health and Social Services. Samples of these materials are provided in Appendix E, however, the themes and graphics were designed to be the same as those found in these guidelines. The primary message was: Be Good to Yourself…Make healthy food choices part of your lifestyle today and everyday. The “common look and feel” is the apple and heart with the messages: “The choice is yours…Choose Well”

Similar messages will also be used as part of the larger Government of the Northwest Territories Healthy Choices Framework Healthy Eating and Active Living Social Marketing Campaign, with additional resources developed in future years.

Appendix B also provides information and resources that explain ingredient and nutrition labels. For example, products with a Health Check symbol can usually be used to select healthy food choices.
The Healthy Choices Goal

The goal of the guidelines is to maximize the availability of healthy foods in the choose most and choose sometimes categories, to minimize choose least options, and to phase out not recommended foods. This is consistent with the territorial directive as well as the GNWT Strategic Plan.\textsuperscript{13}

Minimum Standards

By April 1, 2006, most health and social services authorities elected to promote and provide foods that are:

- at least 50 percent are in the Choose Most category;
- 40 to 50 percent in the Choose Sometimes category; and,
- no more than 10 percent are in the Choose Least category, which acknowledges that staff, residents and patients can enjoy a variety of healthy food choices without jeopardizing their health; and,
- residents, patients and staff will continue to have the choice to purchase and bring in foods and beverages from other sources.

Each Health and Social Services Authority has unique operational requirements for providing a variety of options that generally fit into the categories, with some variation in foods and beverages, timelines and location. However, all authorities have approved the guidelines within these parameters.

Implementation

This approach is being used to promote healthier foods:

1. Partnerships with key stakeholders, including nutrition and health staff, clients, patients, public health professionals, caterers and vendors, to determine the best ways to promote healthier choices in health and social services environments.

2. Health and Social Services Authorities are reviewing any specific healthy food policies that may affect or influence the types of food sold and/or provided at meals, meetings and other events. A sample of a policy that may be used or adapted is included in this document.

3. Health and Social Services Authorities have individual plans to guide the change process that includes time to adapt such equipment as vending machines, cooking equipment and to do the required recipe analysis.

4. Implement standard and/or individual communications/marketing mechanisms to encourage healthy choices. These include the use of the territorial wide promotional materials (posters, etc), and may also include regional and individual promotions, linking this awareness to national campaigns (such as Nutrition Month), or other special initiatives.

5. On-going communication on the progress of this initiative, for those who work in the health care system, for example, updates in the \textit{Feel Good Gazette}.\textsuperscript{14}

6. Regional Nutritionists and Dietitians, employed by Health and Social Services Authorities, are key contacts for consultation regarding for specific nutrition information, or, the Department of Health and Social Services, Health Promotion (healthpromotion@gov.nt.ca).
Food Categories

Guidelines for Healthy Foods Choices

1. Grains
2. Vegetables and Fruit
3. Vegetables and Fruit Juices
4. Milk-based Foods
5. Milk-based Beverages

</table>

### Nutrition Criteria

**ANY of the following:**
- Calories: more than 400
- Fat: 20g or more
- Trans fat: 0.4 g or more, per 8 g of protein
- Sodium: more than 600 mg
- Sugars: are the 1st ingredient
- Calcium: less than 4 % (44 mg)
- Caffeine: 25 mg or more 13

**ANY of the following:**
- Calories: 250 - 400
- Fat: 15 - 20 g
- Sodium: 400 - 600 mg
- Sugars: 36 g or more per 175 ml
- Calcium: 5% or less for every 100 mg sodium
- Caffeine: more than 15 mg and less than 25 mg

**ALL of the following:**
- 1st ingredient must be a milk ingredient (excluding cream)
- Sugars: Between 20-36 g per 175 ml AND any item that passes the Least and Not Recommended, but does not pass the Most criteria
- May be artificially sweetened

**ANY item that passes the Not Recommended, Least, and Sometimes criteria, AND 1st ingredient must be a milk ingredient (excluding cream)**
- Sugars: 20g or less per 175 ml

---

Notes: Specific brands or recipes can differ in fat, sodium, sugar and fiber content. Each food or recipe will need to be reviewed on a “food by food” basis. Generally, foods in Not Recommended category will be phased out, with exceptions noted as appropriate and rationale given. Exceptions can also be noted on specific occasion. Condiments, for example, may be used where there is no specific concern for sodium intakes. Such decisions are left up to the Nutrition Specialists, Health and Social Services Authorities. Nutrition criteria are generally based on serving sizes.
Food Grouping:

**5. Milk-based Beverages**

Milk must be the first or second ingredient. Fortified soy drinks contain protein and calcium and may be assessed in this food grouping. See "Other Beverages" for other fortified drinks (e.g. rice, potato based) and non-fortified soy drinks.

</tbody>
</table>

**Nutrition Criteria**

ANY of the following:

- Size: more than 600 mL
- Calories: more than 600
- Fat: more than 15 g per 250 mL
- Trans Fat: more than 0.4 g per 250 mL
- Sodium: more than 600 mg
- Sugars: are the 1st ingredient Caffeine: 25 mg or more 13

ANY of the following:

- Calories: 400 - 600
- Fat: 10 - 15 g per 250 mL
- Sugars: more than 36 g per 250 mL
- Caffeine: more than 15 mg and less than 25 mg

ALL of the following:

- 1st ingredient must be a milk ingredient (excluding cream) (Fortified soy drinks are exempt from this requirement)
- Sugars: Between 20-36 g per 250 mL AND any item that passes the Least and Not Recommended, but does not pass the Most criteria May be artificially sweetened

ANY item that passes the Not Recommended, Least, and Sometimes criteria, AND ALL of the following:

- 1st ingredient must be a milk ingredient (excluding cream) (Fortified soy drinks are exempt from this requirement)
- Sugars: 20 g or less per 250 mL

Notes: Specific brands or recipes can differ in fat, sodium, sugar and fiber content. Each food or recipe will need to be reviewed on a "food by food" basis. Generally, foods in Not Recommended category will be phased out, with exceptions noted as appropriate and rationale given. Exceptions can also be noted on specific occasion. Condiments, for example, may be used where there is no specific concern for sodium intakes. Such decisions are left up to the Nutrition Specialists, Health and Social Services Authorities. Nutrition criteria are generally based on serving sizes.
Healthy Foods in Facilities

### 6. Meat and Alternatives

A meat or meat alternative must be the first or second ingredient (excluding nuts and seeds). Meat and meat alternatives include: beef, pork, poultry, fish, game meats, and traditional meats and edible parts. Eggs, soybeans, legumes, tofu. See the "Nuts & Seed Mixes or Bars" category for guidelines on these items.

<table>

### Nutrition Criteria

**ANY of the following:**
- Calories: more than 400
- Fat: more than 16 g per 60 g portion
- Saturated Fat: more than 10 g
- Trans Fat: 1 g or more
- Sodium: more than 800 mg
- Iron: less than 1%

**ANY item with:**
- Fat: 12 - 16 g per 60 g portion
- Saturated Fat: 8 - 10 g
- Sodium: 600 - 800 mg
- Protein: 5 g or less

**ANY item that passes the Not Recommended, Least, and Sometimes criteria, AND ALL of the following:**
- Fat: less than 12 g per 60 g portion
- Sodium: less than 400 mg

Notes: Specific brands or recipes can differ in fat, sodium, sugar, and fiber content. Each food or recipe will need to be reviewed on a "food by food" basis. Generally, foods in Not Recommended category will be phased out, with exceptions noted as appropriate and rationale given. Exceptions can also be noted on specific occasion. Condiments, for example, may be used where there is no specific concern for sodium intakes. Such decisions are left up to the Nutrition Specialists, Health and Social Services Authorities. Nutrition criteria are generally based on serving sizes.
### Food Grouping:

#### 7. Nuts and Seed Mixes or Bars

Peanuts, nuts or seeds must be the first or second ingredient.

<table>
<thead>
<tr>
<th>Nutrition Criteria</th>

Notes: Specific brands or recipes can differ in fat, sodium, sugar and fiber content. Each food or recipe will need to be reviewed on a “food by food” basis. Generally, foods in Not Recommended category will be phased out, with exceptions noted as appropriate and rationale given. Exceptions can also be noted on specific occasion. Condiments, for example, may be used where there is no specific concern for sodium intakes. Such decisions are left up to the Nutrition Specialists, Health and Social Services Authorities. Nutrition criteria are generally based on serving sizes.

<td></td>
</tr>
</tbody>
</table>

**Notes:** Specific brands or recipes can differ in fat, sodium, sugar and fiber content. Each food or recipe will need to be reviewed on a “food by food” basis. Generally, foods in Not Recommended category will be phased out, with exceptions noted as appropriate and rationale given. Exceptions can also be noted on specific occasion. Condiments, for example, may be used where there is no specific concern for sodium intakes. Such decisions are left up to the Nutrition Specialists, Health and Social Services Authorities. Nutrition criteria are generally based on serving sizes. Foods containing sugars (natural or added) can leave particles clinging to teeth and put dental health at risk.
Appendix A
Health and Social Services Food Policies – An Example

Specific food policies may be developed in addition to the guidelines, if needed. An example follows:16

1.0 Purpose

1.1 This policy establishes minimum requirements for healthy foods in NWT Health and Social Services Facilities. The policy would set standards for selections of healthy food options as well as awareness of healthy foods and healthy eating.

1.2 If a current policy exists, this information could be used to update or replace an existing policy.

2.0 Application

The food policy can be adapted to apply to health and social service facilities in the Northwest Territories.

3.0 Definitions

Core services include health and social programs and services eligible for public funding and accessible to all residents of the NWT throughout the lifecycle, according to standards, policies and guidelines. Such services can promote individual, family and community wellness. Health promotion and Prevention is one of the six core services of the Integrated Services Delivery Model.

Maximum Nutritional Value includes foods that are good or excellent sources of important nutrients and are low in fat, sugar, calories, salt and other ingredients that do not generally support health. Foods in this group are considered nutrient dense relative to the energy they provide. These foods would normally be provided on a daily basis. In the guidelines, these foods are found in the Choose Most category.

Moderate Nutritional Value includes foods that are a source of nutrients but may be high in fat, sugar, calories or salt. These foods are not as nutrient dense as foods in the maximum nutrition value category. In the guidelines, these foods are found in the Choose Sometimes category and are usually served less often, for example, a few times a week only.

Minimum Nutritional Value includes foods that provide few nutrients and are generally high in fat, calories, sugar and salt. These foods are considered to have low nutrient density relative to the energy they provide. In the guidelines, these foods are found in the Choose Least and Not Recommended categories - generally, these foods would be served up to a maximum of twice per month, gradually phased out, or included due to operational requirements of the facility.

4.0 Legal Authority

The Minister of Health and Social Services establishes health and service goals, standards for health facilities in conjunction with Health and Social Services Authorities.

5.0 Goals/Principles

The Department of Health and Social Services and Health and Social Services Authorities:

- Recognize that healthy eating promotes optimal health and contributes to optimal physical and mental health.
- Recognizes that a comprehensive health promotion approach assists territorial residents attain full health potential by the creation of healthy, supportive environments, through the promotion and provision of healthy foods and eating habits.
- Recognizes that nutrition is an integral part of health and social services programs and services, consistent with the Integrated Services Delivery Model.
- Recognizes that healthy lifestyles include eating foods with maximum nutritional value should be fostered and promoted in all health and social services facilities.
- Are committed to collaborating with other departments and related stakeholders to promote healthier eating and nutrition awareness.
6.0 Requirements/Standards

6.1 General

6.1.1 Foods with maximum nutritional value will be available and promoted where food is sold or otherwise offered, including vending machines, cafeterias and in other programs.

6.1.2 Foods with maximum and moderate nutritional value sold in health facilities will be priced as close to cost as practicable.

6.1.3 Health and Social Services facilities have the opportunity to create a pleasant eating environment.

6.1.4 Foods and beverages sold/provided will be handled with attention to appropriate food safety guidelines.

6.1.5 On a regular basis, health and social services authorities will review the effectiveness of food policies in promoting healthy eating and nutrition.

6.2 Fundraising

6.2.1 The sale of foods with minimum nutritional value in fundraising initiatives will be limited.

6.2.2 Health and Social Services facilities can develop guidelines regarding the sale of foods of moderate or maximum nutritional value on non-food items in fund-raising efforts as appropriate.

6.3 Food Services

6.3.1 Contracts with food providers will be evaluated, in large part, based on their provision of nutritious menu options.

6.3.2 Competitors will not be excluded at the request of a food provider. Additionally, no food provider shall receive exclusive access to any facility indefinitely.

6.3.3 The Chief Executive Officer of a Health and Social Services Authority has the authority to sign food service contracts.

6.3.4 Programs and meal services will be consistent the Guidelines.

6.3.5 The sale and promotion of foods, including items in vending machines, will primarily consist of foods with moderate or maximum nutritional value only.

6.3.6 Foods with minimum nutritional value, including vending machines, will be phased out, starting April 1, 2006. Health and Social Services Authorities will also promote foods with maximum and moderate nutritional value as part, and/or in addition to, a territorial strategy.

7.0 Guidelines/Recommendations

7.1 When serving food, attention should be paid to appropriate foods and serving sizes, as recommended in the Canada and NWT Food Guides.

7.2 Health and Social Services facilities and community partners can promote foods with maximum nutritional value on health and social services premises. This includes modelling healthy eating behaviours.

7.3 Health and Social Services facilities can support and reinforce messages about healthier eating.

7.4 For special occasions, celebrations, holidays, etc, every effort could be made to include foods with moderate or maximum nutritional value.

7.5 Health and Social Services facilities may encourage partners, staff, clients and residents to provide healthy supportive environments.

8.0 Health and Social Services Authority Policy Making

Health and Social Services Authorities can develop policies with respect to nutrition in facilities that are consistent with, or more comprehensive, as appropriate.
Appendix B
1. Understanding Ingredient Labels

Every product has an ingredient list. For small bulk items, the list might be on the carton rather than the individual package. Ingredients are listed in descending order - that is, the amounts by weight get smaller and smaller. Usually the first 3 - 5 ingredients (not including water) reflect nutritional content. Artificial sweeteners and caffeine don’t weigh very much so are usually near the end of the ingredient list.

Milk Ingredients: Milk needs to be the first ingredient for the Milk-based Foods and Milk-based Beverages categories. Look for these words:
- Milk (whole/2%/1%/skim, non fat)
- Evaporated Milk
- Skim Milk Powder
- ‘Milk Ingredients’, Milk Solids (may be modified)

Trans fats are strictly limited in the Guidelines. If there is no Nutrition Facts label, these words in the ingredient list give you an idea of how much trans fat might be in the product:
- Shortening
- Margarine (not all have trans fat)
- Partially hydrogenated oil

Artificial sweeteners: Artificial sweeteners are safe for children and adolescents to consume in the amounts provided in foods and beverages. The Guidelines allow artificial sweeteners when they are used to sweeten a nutritious food. Look for these names in the ingredient list:
- Splenda (Sucralose)
- Nutrasweet (Aspartame, Sweet’n Low, Sugar Twin)
- Acesulfame Potassium (Ace-K)
- Cyclamate (Sugar Twin, Sucaryl)
- Sugar alcohols (maltitol, sorbitol, xylitol, etc, also polydextrose, hydrogenated starch hydrolysates, isomalt)

(Note: Some foods are sweetened with stevia. Stevia is an herb that is not approved by Health Canada.)

Sugars can be from many sources and in many forms. Look for these words on the ingredient list for added sugars:
- "ose" words: sucrose, fructose, dextrose, maltose, etc
- syrups: cane syrup, rice syrup, corn syrup, maple syrup, etc
- concentrated fruit juice (used to sweeten many products other than 100% fruit juice, but adds very few nutrients to the products)
- Honey, Molasses

Salt can be from these sources, but check the Nutrition Facts Label for total sodium:
- Salt, Sea Salt
- Sodium
- Sodium chloride
- Soy sauce
- MSG (monosodium glutamate)
- Baking soda, baking powder

Caffeine is listed as an ingredient only if it is added to something. Coffee drinks would not list caffeine as an ingredient, but cola drinks would. If the following ingredients are present, caffeine levels may exceed the Guidelines:
- Caffeine
- Coffee (not coffee flavouring)
- Tea (black or green)
- Maté, Yerba Maté
- Guarana
Appendix B
2. Understanding Nutrition Facts Panels

The Nutrition Facts panel is used to classify a food or beverage as ‘Choose Most’, ‘Choose Least’, ‘Choose Sometimes’, or ‘Not Recommended’. Most foods and beverages are required to have a Nutrition Facts panel by December 12, 2005. Small manufacturers have until December 12, 2007. For small bulk items the panel might be on the carton rather than the individual package.

Compare this amount to the size of the package being sold. Is it the same or is it smaller, bigger?

Sodium mg/portion sold is restricted for many of the food groupings.

In the Guidelines, the amount of a nutrient allowed is always based on the total package size you are selling (unless otherwise specified).

In this example, if the package was 250 ml, it would contain twice what the Nutrition Facts Label shows, e.g. 36 g of carbohydrate.

The % refers to the proportion of the total recommended daily amount for someone with the highest needs.

For more help in interpreting Nutrition Facts panels or items without a Nutrition Facts panel, contact your local community nutritionist or Dietitian.

For more information on reading nutrition fact labels and ingredient lists:
http://www.hc-sc.gc.ca/fn-an/label-etiquet/index_e.html
Appendix C
A Strategy For Change

The Guidelines for NWT Health and Social Services Facilities are just one tool for promoting healthier eating habits. These guidelines are also part of a broader territorial Healthy Eating Social Marketing Strategy under the Healthy Choices Framework. The NWT Healthy Foods in Facilities Working Group is also using similar approaches to those used with success in other jurisdictions. These approaches include:

Step 1: Develop Partnerships

Key stakeholders, including health and social services authorities, nutritionists, public health professionals, clients, retailers, caterers, vendors, can assist in determining approaches best suited to the needs of publicly funded health and social services facilities. Evidence suggests that organizations that have formalized groups that focus on nutrition offer more healthy choices and are more likely to implement policies encouraging healthy eating.

Partners can share information on:
- the impact of nutrition on health and well-being;
- the influence of the facility environment on food selection;
- what makes an item a healthy choice; and
- marketing strategies to affect healthy choices.

Additional nutrition resources can be found at:
- Dietitians of Canada at: www.dietitians.ca

Step 2: Develop Policy

NWT Health and Social Services Facilities may choose to adapt, update or developing policies that influence the types of foods served or sold.

Stakeholder involvement is critical if policies are to be effective, especially when communicated to staff, clients, and others. Communication can take place through:
- staff newsletters;
- staff orientation and meetings;
- announcements at events; and
- community meetings.

A sample of areas to consider for draft policies are is provided on page...

Step 3: Develop Transition Plans

The Guidelines can also provide direction for implementation and rationale. A transition plan can give facilities appropriate time to allow stakeholders to adapt to changes as well as time to work with vendors on product changes or to reformulate and repackage products. Some facilities do need a transition phase to honour existing contracts.

Healthy food and beverage choices can be offered without delay where there are a wide variety of foods already available. Healthy snacks for vending machines are available but not as plentiful, so more time may be needed for manufacturers to provide different options.
Step 4: Develop and Implement Marketing Mechanisms

When promoting healthier food and beverage choices, the communications strategy will consider these factors:

**Variety**
- A variety of healthy food and beverage choices will encourage consumption of healthier food products.

**Stocking**
- Healthier food choices can be more plentiful and more visible.
- Vendors and caterers are a good source of information and can assist in finding healthier products. Vending machines can make healthier beverage options more visible.
- Cafeterias can display healthier foods and the healthy choices promotional items more prominently.

**Marketing**
- There may be many opportunities and examples of campaigns to promote healthier products.
- In some facilities, newsletters can communicate healthy eating campaigns.

**Pricing**
- Price is an important factor in helping make healthier choices.
- Where healthier items cost less, it is more likely that these items will be chosen over their more expensive, less nutritious counterparts.
- Pricing strategies can be used to great effect. In some locations, it has been found that sales of foods (such as coffee) do not decrease. Raising the prices of less healthy products can compensate for decreased profit margins on healthier products, without an overall loss of revenue.
Appendix D
Map of the NWT Health and Social Services Authorities
Be good to yourself...

Make healthy food choices part of your lifestyle today and everyday!
