Attention: Mr. R.J. Gowan  
Geotechnical Advisor

Dear Bob:

Subject: Final Report  
Granular Resources Database  
Dempster Highway Corridor YT/NWT

Please find enclosed fifteen (15) copies of our final report on the Dempster Highway Corridor Granular Resources Database, including the printed copies of the study and deposit catalogues bound in Appendix B and C, respectively. Also, three (3) 360K floppy disks with the dBase III+ and R&R files for the study and deposit catalogues are enclosed. As discussed previously, the six (6) printed copies of the ESEBase logs and the three (3) disk copies for the ESEBase Dempster database will be sent from Whitehorse via courier by June 27, 1988.

We trust that this report satisfies your requirements. Please note that it is our belief that the database cannot be used to it's fullest

---

potential unless the recommendations presented in this report are adhered to. We would be pleased to provide further assistance to you, in this regard.

Yours truly,

*Sheryl M. King*

## 1.0 INTRODUCTION

EBA Engineering Consultants Ltd. (EBA) has completed a compilation of existing geotechnical data for the evaluation of granular resources along the Dempster Highway Corridor, Yukon and N.W.T. The work was requested by Indian and Northern Affairs Canada (INAC), in a proposal request dated 1988-01-20. The project was authorized under Contract No. 87-0172 on March 7, 1988.

### 1.1 Study Area

The study area includes a corridor extending eight kilometres on each side of the Dempster Highway from its junction with the Klondike Highway in the Yukon Territory, to its junction with the Mackenzie Highway approximately 65 kilometres south of Inuvik, N.W.T., and the section of the Mackenzie Highway between the Dempster Highway and the southern boundary of Inuvik. The total distance is approximately 740 km. Figure 1 shows the location of the Dempster Highway Corridor, and the area of study.

### 1.2 Scope of Work

The project objective was to assemble and catalogue the available geotechnical and related geoscientific data for the Dempster Corridor and to compile the information in a standardized computer-based format to permit analysis of the corridor's granular resources. To achieve this objective, five major tasks were performed:

Task 1: Locate, collect, organize and compile all existing geotechnical and geophysical data reports for the Dempster Highway into a computerized database, using dBase III+.

<b>EBA Engineering Consultants Ltd.</b>			PROJECT	DEMPSTER HIGHWAY DATABASE

---

- Task 2: Review the collected reports with respect to quantity, quality and detail of borehole logs, and determine usefulness of the logs for evaluation of granular resources along the highway. Select borehole logs for input into the database (ESEBase).
- Task 3: Photocopy all logs, associated laboratory test results, site plans, location maps and other data, and sort with respect to highway kilometre post. Review each log, and where necessary and backed up by laboratory data, re-draft the log in a standardized accepted format. The format used is attached to the printed copies of the borehole logs. Finally input the logs into the ESELog/ESEBase program, Version 3.0, borehole log database.
- Task 4: Group the logs into separate geological deposits or pits, and compile data for each deposit (source) into a database (dBase III+)
- Task 5: Prepare a final report to describe the results of the study.

## 2.0 METHODOLOGY

The first four tasks are described in this section.

### 2.1 Task 1 - Compilation of Study Catalogue

To prepare the list of available reports, a number of meetings and telephone conversations were held to locate and obtain copies or access to all available reports, maps, charts and survey records for the Dempster Highway Corridor.

---

June, 1988

---

Ten reports were loaned to us by R.D. Cook., Head of Design and Geotechnical Engineering Services, Western Region, Public Works Canada, Edmonton.

Mr. T.R. Murphy, P. Eng., from EBA's Edmonton office, travelled to Yellowknife, Northwest Territories, to meet with Mr. P. Vician, Head of Design Services, Highways, Government of the Northwest Territories. At this meeting, the status of a number of granular sources for the Northwest Territories portion of the Dempster was discussed and four reports were made available for our use. A trip to Inuvik to meet with Mr. A. Barnes was not conducted, because it was determined that all the applicable geotechnical information from the Government of NWT was kept in Yellowknife.

For the Yukon, access to the Dempster Highway files of the Yukon Territory Government was authorized by Mr. J. Murray, Program Engineer, Transportation Engineering Branch, Community and Transportation Services, Government of Yukon. Mr. R. Lidgren of Public Works Canada authorized the loan of reports or files in their library.

Reports were also received from Klohn Leonoff Consultants Ltd. and Hardy BBT Ltd. for geotechnical work along the proposed Dempster Lateral Pipeline for Foothills Pipe Lines (Yukon) Ltd. These reports were not received until late in the borehole compilation process due to liaison and waiting time while requesting permission from all parties involved.

All the collected reports that contained geotechnical or geophysical information for the Dempster Corridor were summarized in a dbase III+ Catalogue of Granular Resource Related Field Activities. Standardization of the input was in terms of the guidelines described in the data dictionary included with the proposal request, and copied into this report as Attachment "B", in Appendix A. Study numbers as described in the data dictionary were not assigned to each study as we understand that these would be INAC numbers. We did use the study number field on occasion to

---

June, 1988

---

include library catalogue numbers, when available. The numbers do not follow the format as outlined in the data dictionary and will have to be changed when numbers are assigned to the remaining studies. The catalogue was completed with the intention of including any and all available references noted on the reports. If information was not available, not applicable or unknown, "NA", or "Unknown" would be inserted in the appropriate field.

## 2.2 Task 2 - Review of Data

As part of task 2, Mr. R.J. Gowan of INAC travelled to Edmonton on March 16, 1988 and met with Mr. T.R. Murphy of EBA Edmonton, and Mr. M.A. Valeriote, a representative from EBA's Whitehorse office.

At this meeting, the criteria to be used for exclusion or inclusion of individual borehole or test pit logs was established. It was decided that test holes in either existing, possible or depleted sources should be included in the ESEBase database and the corresponding sources included in the deposit database. Depleted sources would be edited out, once confirmed. Additional reports not yet collected by us were discussed, and INAC assisted us in gaining access to these reports.

Also included in Task 2 was review of the available information required to prepare a granular resources management plan.

## 2.3 Task 3 - Compilation of ESEbase Records

After editing and adding location references, when available, all test hole logs deemed applicable were input using the newest version of ESEBase. All logs were reviewed for detail and accuracy, and edited as required. If the soil description was not consistent with the results from soil sample laboratory tests, the soil description would be correspondingly corrected. If no laboratory results were available for a specific stratum, the description would not be altered upon input.

---

June, 1988

---

UTM coordinates were obtained for the test holes by obtaining a UTM for the approximate center of the source in which the holes were located, and assigning all holes for the same source the same UTM coordinates. Where site plans or airphotos were available, UTM coordinates were obtained by matching geographical references points on the plans to those on the 1:50000 NTS maps. When plans were not available, a kilometre or mileage post would be scaled off the NTS map and an approximate UTM coordinate obtained for the posting, not taking into account the offset of the source to the left or right of the highway.

The original borehole or test pit numbers obtained from the original reports were recorded in the ESEBase index in "Drillers Note 3". To assist in organisation and sorting of records in the database, a new unique borehole number was assigned to each record. The first four digits correspond to the kilometre post for the source, to one decimal place. The letter, "B" or "T", corresponds to a borehole or test pit, respectively, and the last three digits in the borehole or test pit number correspond as closely as possible to the original borehole or test pit number.

#### 2.4 Task 4 - Compilation of Deposit Database

Input of deposit (source) information as dbase III+ records, was according to the data dictionary found in the proposal request, and included as Attachment "A", Appendix A of this report. Source numbers were not assigned and study numbers were only input where study numbers were available from the study catalogue of Task 1. Where information was unavailable or unknown, "Unknown" was input into the database record; if the information requested was not applicable to the source, an "NA" was input in the record. Some records would not accept non numeric input, in this case if results were unknown or not applicable, a zero would be input in the record.

June, 1988 (revised July/88)

---

### 3.0 DATA PRESENTATION

The three major components of this study are presented as follows:

#### 3.1 Study Catalogue (66 Records)

Fifteen (15) copies are attached to the fifteen copies of this report, as Appendix B. Three (3) copies have been submitted in 360K floppy disks, in a dBase III+ file called GRANCAT.DBF. The report outline is in an R&R (Relational Report Writer) file called GRANCAT.RP1.

#### 3.2 Deposit Database (118 Records)

Fifteen (15) copies are attached to the fifteen copies of this report, as Appendix C. Three (3) copies have been submitted on 360K floppy disks, in a dBase III+ file called SOURCAT.DBF. The report outline is an R&R file called SOURCAT.RP1.

#### 3.3 Borehole Database (576 ESEBase Records)

The borehole log database is included in printed form in two separate volumes called:

Dempster Highway Granular Source Borehole Log Database,  
Volume I of II, and  
Volume II of II.

Six (6) copies have been submitted, along with three (3) 360K floppy disk copies, on which the ESEBase database is called DEMPSTER.

NOTE: Approximately 4000 Borehole/Test Pit logs were reviewed during Task 2 (Review of Data), and an additional 76 logs were located which would complete the inventory of granular data along the corridor. These were not input due to the budgetary constraints defined in the contract.

June, 1988

---

#### 4.0 DIFFICULTIES AND DEFICIENCIES NOTED WHILE PREPARING THE DATABASE

##### 4.1 Source Locations

Borehole or test pit locations were obtained by determining the approximate center of the source and assigning a kilometre post and UTM coordinate for the source center. A number of problems were encountered when determining the source locations.

Over the years that geotechnical information has been gathered for the Dempster Highway, a number of realignments have been made thus milage and kilometre postings have been continually changing. It is unknown which alignment the highway followed for each particular year of investigation, therefore the following kilometre post assumptions were made:

##### YUKON SECTION

- a) km 0 is the junction of Dempster Highway and Klondike Highway.
  - b) km 195 is the Ogilvie Bridge, for locations noted from km 0 to km 198
  - c) km 198 is the Ogilvie Bridge for locations from km 198 to km 245
  - d) km 245 is the bottom of the hill climbing east out of the Ogilvie River Valley
  - e) km 264 is the Eagle Plains Hotel, and was used to back-track kilometre posts to the Ogilvie River Valley (km 239)
  - f) km 413 is the Arctic Circle crossing
  - g) km 461 is the YT/NWT border.
- 

June, 1988

---

Figure 2 shows these assumptions on the location map.

For most of the Yukon sources there were no site plans, air photos or location maps, and source locations were estimated using kilometre posts or mile posts as found on the logs. Using these assumptions and the kilometre posting, the sources were scaled off the highway alignment on the NTS maps, and UTM's determined to the nearest 1000 metres. A listing of the NTS maps used is presented in Table 1. It should be noted that the alignment on the NTS maps is most likely the original alignment for the construction of the highway.

If a source was known to be at a particular geographical reference point recognizable on an NTS map, such as a creek crossing or at the top of a hill, the scaled-off location according to the above assumptions would be disregarded and UTM coordinates for the geographical reference according to the NTS alignment were used.

#### NWT SECTION

For source locations in the Northwest Territories there was usually an airphoto half-tone with borehole locations marked. By using geographical reference points on the airphotos, an approximate location and UTM coordinates could be determined from the NTS maps. Mileage posts for the Dempster or Mackenzie Highway were generally shown on the airphotos, and kilometre posts were assigned for each source, using the following assumptions:

- a) the YT/NWT border is km 468
- b) access to Fort McPherson is km 554
- c) Arctic Red River is at km 611

- NOTES: 1. Date denotes the date compiled, produced or date of most current information for mapping. A "c" prior to the date denotes it as a copyright date and not the date of most recent information.
2. "\*" indicates maps that did not show the Dempster Highway alignment, either existing or proposed.

June, 1988

---

d) km 1499 on Mackenzie Highway corresponds to km 675 on the Dempster Highway

e) Inuvik is km 736

These locations are also shown on Figure 2, and maps summarized on Table 1.

Realignments of the highway have caused many of the problems associated with determining source UTM coordinates and kilometre posts. For example, in different reports, the Yukon/Northwest Territories border had been assigned kilometre postings of 460, 466, 467 and 468. When locations were being determined for the Yukon portion it was found that approximately 10 kilometres of highway had been lost by realignment. There are also no NTS maps available with the most recent highway alignment.

#### 4.2 Completeness of Logs

Due to the number and range of experience of the technicians logging the test pits or boreholes, there was a wide range of reliability and completeness of the logs. It appears that a soil classification system was not adhered to and there were no attempts made to correct the descriptions on the logs once lab test results were received. A general incompleteness of logs, including lack of dates, type of equipment, location, laboratory tests, personnel and type of samples taken, etc., was evident in most of the reports.

#### 5.0 RECOMMENDATIONS AND CONCLUSIONS

Adherence to the following recommendations would significantly improve the usefulness of the deposit database, study catalogue and ESEBase records.

1. The Dempster Highway should be reposted to reflect recent realignments

---

and reconstructions. In the future, realignments should be properly documented so that sources can be assigned new kilometre postings after the realignment.

2. The additional 76 logs not entered into the database for this phase of the work should be entered.
3. A ground reconnaissance (driving trip) should be made of the Dempster Highway to confirm specific pit locations and their status. Locations obtained from this reconnaissance should be primarily in UTM coordinates with dated kilometre postings as backup. Kilometre postings should be used only as a quick convenient means of location in the field, and secondary to the UTM coordinates. Photographs and verification or estimates of material quality and quantities should also be made at this time.
4. This report and catalogues should be submitted to the Yukon and Northwest Territories Governments, Public Works Canada offices and other government agencies directly involved with the Dempster Highway, for their review and comments.
5. Once all the comments have been received, the database records prepared as part of this study should be updated. It is our belief that the database cannot be used to it's fullest potential until all of the above recommendations have been completed.
6. Future borehole logs and test pits should be properly documented including site plans and location maps. UTM coordinates should be determined and placed on the logs at the time of the report preparation.
7. A standardized field manual should be instituted for future drilling programs, along with training of individuals who are to perform the sample logging. This is recommended to improve the quality and completeness of future logs.

APPENDIX A

ATTACHMENT "A" (from original Request for Proposal)

Northern Granular Resource Deposit Database  
Data Dictionary

ATTACHMENT "B" (from original Request for Proposal)

Catalogue of Granular Resource Related Field Activities  
Data Dictionary

## NORTHERN GRANULAR RESOURCE DEPOSIT DATABASE

## DATA DICTIONARY

## PART A: DEPOSIT LOCATION AND STATUS

## AA - STUDY NUMBER:

A unique number which identifies the study in which the source was first described in detail and provides a link to INAC's granular resource study catalogue database. This number consists of an alphabet prefix representing the study catalogue database, a four digit study number, and where necessary, a one digit sub-number to separate, for example, geophysical and geotechnical portions of the same study. (e.g. A-0137-1)

## AB - SOURCE NUMBER:

Each source will require a unique source identifier number, normally the number of the source in the original study which located the source, which will serve as a link to other databases (e.g. borehole database). This number will consist of an alphanumeric sequence of up to eight digits. (e.g. 311)

## AC - NTS MAP REFERENCE:

The National Topographic Series (NTS) 1:50,000 scale map reference number of the map containing the majority of the outlined deposit. (e.g. 107A/15)

## AD - SOURCE REFERENCE:

The bibliographic citation, by author and year, of the report describing the deposit. (e.g. Northern Engineering, 1976.)

## AE - LOCATION MAP/PLAN SCALE:

The scale, expressed in terms of the representative fraction (e.g. 1:250,000) of any small scale accompanying regional map which indicates the location of separate study/borrow sites. The denominator only of the representative fraction is given since by definition the numerator is unity. (e.g. 250000)

## AF - MAP DIGITIZER NUMBER:

A unique five digit identifier number, to be assigned later by INAC, which identifies a data set of points, lines, or polygons to be digitized from the location plan. This number links the granular deposit database to INAC's spatial database system.

## AG - LOCAL NAME(S):

Many sources are known locally by a name or more than one names, rather than the designated source number. Although these names may vary over time or be duplicated between sources, they should be recorded as is. (e.g. Callison Pit)

## AH - CROSS-REFERENCES:

The bibliographic citation(s), by author and year, of any other reports which include granular resource data on the subject deposit; and any alternative source number or name included in the cross-referenced report. (e.g. Hardy, 1986: 3-34)

## AI - LOCATION:

The location of the deposit may be described in terms of its proximity to a community or other prominent geographical feature and/or in up to three separate sets of co-ordinates due to the varying requirements of granular resource data users. This field(AI) includes the descriptive location (e.g. Hay River; Mt. Fitton).

The next seven fields (AJ - AP) provide location co-ordinates. These include the geographic co-ordinates, the Universal Transverse Mercator (UTM) co-ordinates, and transportation system (e.g. highway or pipeline) co-ordinates. In each case, the co-ordinates are normally determined for the approximate centre of the deposit.

## AJ - LATITUDE:

The distance, in degrees, minutes, and seconds, and direction, of the deposit from the Equator. (e.g. 67-36-45.9N)

## AK - LONGITUDE:

The distance, in degrees, minutes, and seconds, and direction, of the deposit from the Prime Meridian. (e.g. 132-27-12.3W)

## AL - UTM ZONE/EASTING:

The UTM zone in which the deposit occurs, and the north-south oriented UTM grid line passing through the centre of the deposit. (e.g. 7-381987)

## AM - NORTHING:

The east-west oriented UTM grid line passing through the centre of the deposit. (e.g. 7548335)

## AN - CORRIDOR NUMBER AND NAME:

The number (i.e. Territorial Highway number, where appropriate) and the name of the transportation route within whose corridor the deposit occurs. (e.g. 05-Robert Campbell Highway; 00-Foothills Pipeline - Dempster Lateral)

## AO - KILOMETER POST:

The kilometer post (KP) of the point along the transportation corridor at which access is relatively direct to the deposit, or the most nearly adjacent point on the corridor to the location of the deposit.

## AP - OFFSET: DISTANCE AND DIRECTION:

The distance in meters from the corridor centreline to the centre of the deposit and the direction, determined facing towards the increasing kilometer-post, to the deposit from the corridor. (e.g. 35-L[left]; 1500-R[ight])

## AQ - AREA:

The total areal extent, in hectares, of potentially usable granular resources which comprise the deposit. (e.g. 1; 10; 100)

## AR - ACCESS:

A short description of the most practical route leading from the corridor to the deposit. Where the access route does not lead directly from the corridor to the source, the KP of the corridor at the location of the access route should be given (e.g. series of seismic cutlines; along north bank of river; follows ridge crest from KP 265.7; shorter but steeper alternative at KP 576)

## AS - DISTANCE:

The distance along the above described access route from the corridor to the deposit. Ideally, this should be the same as the offset distance; however, where this is not possible due to steep slopes or rivers, the access distance can vary significantly from offset. (e.g. 40; 1250)

## AT - CONDITION:

A description of the type and condition of the access route. (e.g. seismic line; undeveloped; winter road; ice road)

## AU - SITE PLAN SCALE:

The scale, expressed in terms of the representative fraction (e.g. 1:10,000) of any larger scale accompanying site plan which indicates the location of boreholes/ testpits/grab samples or geophysical survey grids. The denominator only of the representative fraction is given since the numerator is consistently "1" (e.g. 10000)

## AV - PLAN DIGITIZER NUMBER(S):

A unique five digit identifier number or series of numbers, to be assigned later by INAC, which identifies a data set of points, lines, or polygons to be digitized from the site plan. This number links the granular deposit database to INAC's spatial database system.

## AW - LAND TENURE:

The legal status of the land upon which the deposit is located. (e.g. Inuvialuit 7(1)a; private; Territorial)

## AX - STATUS:

The current status of the deposit in terms of development of granular resources. (e.g. active; inactive; abandoned; depleted; undeveloped; stripped; unproven)

## AY - PAST USE:

A summary of any known previous source development or exploitation activity in terms of type and amount of material removed and use of material. (e.g. 12,000 cu.m of silty sand removed by YIG in 1979 for gravel surfacing)

## AZ - PERFORMANCE RATING:

A summary of any known assessment of the performance of previously used material from the source. (e.g. poor binding, segregates with minimal traffic)

## PART B: SOURCE INVESTIGATION AND DESCRIPTION INFORMATION

## BB - INVESTIGATION LEVEL:

The greatest level of detail of previous site investigation work at the subject deposit. (e.g. airphoto interpretation; reconnaissance; exploratory drilling; delineation drilling; production drilling)

## BC - LAST DATE:

The year in which the most recent site investigation work was completed.

## BD - GEOPHYSICAL DATA:

The type and length of any geophysical surveys completed at the deposit. TYPE: LINE M:(e.g. EM-31 ; 1550 m)

SUBSURFACE DATA:  
.....

The number, and range and average depth of subsurface penetration of various site investigation methods, presented in the following format:

METHOD OF INVESTIGATION: NUMBER OF: MIN./AVG./MAX. PENETRATION:

## BE - BOREHOLES: NUMBER:

The total number of boreholes (augerings, borings, coreholes, etc.) completed and logged within, or immediately adjacent to the deposit, which provide subsurface information defining the type, extent and quality of granular materials.

## BF - BOREHOLES: DEPTH:

A listing of the minimum, average and maximum depth of penetration of the total collection of boreholes for the deposit, in tenths of metres. (e.g. 03.1-05.6-10.3)

## BG - TESTPITS: NUMBER:

The total number of hand- or equipment-excavated testpits or trenches completed and logged within, or immediately adjacent to the deposit, which provide subsurface information defining the type, extent and quality of granular materials.

## BH - TESTPITS: DEPTH:

A listing of the minimum, average and maximum depth of penetration of the total collection of testpits for the deposit, in tenths of metres. (e.g. 0.5-2.6-5.3)

## BI - EXPOSURES: NUMBER:

The total number of natural or man-made exposures or outcrops (e.g. on steep slopes, stream banks; or exposed pit faces, cutbanks), within, or immediately adjacent to the deposit, which have been logged to provide subsurface information defining the type, extent and quality of granular materials.

## BJ - EXPOSURES: DEPTH:

A listing of the minimum, average and maximum depth of subsurface materials exposed in the total collection of exposures for the deposit, in tenths of metres. (e.g. 01.5-06.1-15.0)

SOURCE DESCRIPTION:  
.....

A brief summary of the physical setting of the deposit which will aid in the analysis and understanding of the type, extent, quality and uniformity of the available granular materials and the suitability of the deposit for development and exploitation.

## BK - TOPOGRAPHY:

A general description of the collective physical features, relief and contour of the area. (e.g. flat, gently rolling, rolling, hummocky, undulating, ridged, dissected, plateau, mountainous)

## BL - SLOPE:

A general description of the slopes on and immediately adjacent to the deposit in terms of type (e.g. simple; compound; complex), degree (e.g. flat; gentle; moderate; steep; precipitous) and direction (e.g. to NNW).

## BM - VEGETATION:

A general description of the most significant features of the vegetation cover on and immediately adjacent to the deposit which may provide an indication of the type of materials within the deposit, the presence or absence of permafrost or wet conditions, or potential site development or restoration difficulties. Vegetation should be described, as appropriate, in terms of age, size or complexity (e.g. mixed; sapling; mature), density (eg. nil; sparse; moderate; dense) and type (e.g. poplar; black/white spruce; jackpine; willow) for each of tree cover, understorey and ground cover. (e.g. mature mixed poplar and white spruce to 15 m, few tamarack /sparse poplar saplings / dense bearberry, sparse sphagnum and sedges)

## BN - DRAINAGE:

A general description of the general direction and apparent condition (e.g. well; moderate; poor; saturated; flooded) of surface and subsurface drainage at the site. (e.g. SSE-moderate, flooded to S)

## BO - PERMAFROST FEATURES:

A general description of surface and/or subsurface features which demonstrate or indicate the presence of permafrost conditions within or adjacent to the deposit. (e.g. low-centre polygons and thermokarst to W; sparse stunted black spruce and thick sphagnum; trace Vx in 2 BHs)

## BP - ACTIVE LAYER THICKNESS:

A listing of the minimum, average and maximum measured thickness of the seasonally thawed and frozen active layer within and adjacent to the deposit, determined from the boreholes, testpits, probings and exposures which encountered apparently perennally frozen materials, in tenths of metres. (e.g. 0.2-1.0-1.8)

## BQ - SITE DESCRIPTION DATE:

The date on which the site description was completed, or where more than one site visit was involved, the date upon which the maximum active layer thickness was measured, presented in the format: yy-mm-dd (e.g. 79-09-13).

## BR - GENERIC ORIGIN:

The environment of deposition or geologic process believed to be responsible for the formation of the subject surficial feature or deposit comprised of granular materials. (e.g. alluvial; fluvial; glacial; glaciofluvial; glaciomarine; lacustrine)

## BS - LANDFORM:

The type of surficial feature comprising the subject granular materials, within which geologic conditions are interpreted to be relatively uniform or are variable within limits characteristic of the type of feature. (e.g. delta; esker; fan; kame; outwash plain; terrace)

SOURCE STRATIGRAPHY:  
-----

A general description of the type and range and average thickness of the main surficial materials units comprising the granular source, based on subsurface information from only those boreholes, testpits and exposures which encountered granular materials, and presented in the format:

UNIT: MATERIAL TYPE: MIN./AVG./MAX. THICKNESS

## BT - OVERBURDEN: TYPE:

A brief description of the type of overburden materials present over the area containing granular materials. (e.g. PEAT\_\_\_\_- over silt)

## BU - OVERBURDEN: THICKNESS:

A listing of the minimum, average and maximum thickness of overburden materials over the deposit, determined from the boreholes, testpits and exposures which encountered granular materials, in tenths of metres. (e.g. 0.0-1.2-2.8)

## BV - GRANULAR: TYPE:

A brief description of the type of granular materials encountered within the area delineated as a granular source. (e.g. GRAVEL AND SAND, well-graded; SAND\_ - gravelly, some silt)

## BW - GRANULAR: THICKNESS:

A listing of the minimum, average and maximum thickness of granular materials over the deposit, determined from the boreholes, testpits and exposures in the area delineated as a granular source, in tenths of metres. (e.g. 01.0-05.2-12.8)

## BX - UNDERBURDEN: TYPE:

A brief description of the type of materials underlying the granular materials in the source area. (e.g. CLAY\_ - (Till) wet)

## BY - DEVELOPMENT CONSTRAINTS:

A general indication of any potential constraints to short or long term development of the source, expressed in terms of the type of constraint. (e.g. access; materials; drainage; permafrost; environmental; socio-economic) with details, as appropriate, on the nature and impact of the constraint.

## BZ - DEVELOPMENT POTENTIAL:

A summary comment, expressed in qualitative terms, of the general suitability of the deposit for development. The potential is based essentially on the anticipated overall extent and quality of the available granular materials, but also considers the level of detail of existing site investigation, the presence, extent and type of overburden, drainage and permafrost conditions, other surface or sub-surface characteristics and general accessibility. (e.g. unknown; unsuitable; poor; fair; good; excellent)

## PART C: TEST RESULTS AND MATERIAL QUANTITY

## TEST RESULTS:

A summary of the cumulative results of laboratory testing, completed in accordance with ASTM or CSA standard test procedures, of samples from the deposit in terms of test name, number of samples tested, and ranges and averages of test results, presented in the following format:

TEST: NO. SAMPLES: MIN./AVG./MAX. TEST RESULTS:

## CC - UNIFIED SOIL: NUMBER:

The number of samples classified under the Unified Soil Classification (USC) system, in accordance with ASTM standard D 2487. (e.g. 121)

## CD - UNIFIED SOIL: CLASS:

The range and most common material types sampled from the deposit as classified by the Unified Soil Classification (USC) system and presented in the order: poorest/most/best. (e.g. SM-SP/SP-GP/GW...)

## CE - MOISTURE (%): NUMBER:

The number of samples for which soil Moisture Content (MC%) has been determined, in accordance with ASTM standard D 2216. (e.g. 102)

## CF - MOISTURE (MC%): RESULTS:

The range and average soil Moisture Content (MC%), based on percentage of dry soil weight, for the collection of samples tested, presented in the format: minimum-average-maximum MC%. (e.g. 03-12-021)

## CG - OVERSIZE (O/S%):

The range and average percentage of oversized (O/S%) material; that is, cobble- and boulder-size material (Size Fraction over 75 mm diam.), in pit run material from the source, as determined by field estimates, field sieving, or laboratory testing. (e.g. 00-10-35)

## CH - SIZE ANALYSIS: NUMBER:

The number of samples for which particle-size analysis testing has been completed, in accordance with ASTM standards D 421 and D 422. (e.g. 111)

## CI - GRAVEL (Grav%):

The range and average percentage of gravel-sized (Grav%) material; that is, material in the Size Fraction 4.76 mm - 75 mm diam., as determined by particle-size analysis testing. (e.g. 05-45-85)

## CJ - SAND (Sand%):

The range and average percentage of sand-sized (Sand%) material; that is material in the Size Fraction 0.074 mm - 4.76 mm diam., as determined by particle-size analysis testing. (e.g. 25-37-52)

## CK - FINES (Fine%):

The range and average percentage of silt- and clay-sized (Fine%) material; that is material in the Size Fraction under 0.074 mm diam., as determined by particle-size analysis testing. (e.g. 02-07-12)

## CL - D-50:

The range and average Median Diameter (D-50), in microns, of samples subjected to particle-size analysis testing. (e.g. 00210-01200-03600)

## CN - PETROGR. NO. NUMBER

The number of samples for which Petrographic Analysis testing has been completed to determine the Petrographic Number (PN) of samples from the deposit, in accordance with CSA standard A23.2, Appendix B. (e.g. 01, 10)

## CN - PETROGR. NO.: RESULTS:

The range and average Petrographic Number (PN) for the deposit, based on petrographic analysis, for the above collection of samples, presented in the format: minimum-average-maximum. (e.g. 102-114-123)

## CO - OTHER TESTS:

A listing of up to eight other types of tests conducted on samples from the deposit, the number of samples tested, and the average values of the test results, presented in the format: test (11 digits)-number (2 digits)-average results (4 digits). Typical entries, described in more detail below, include: (e.g. Organ\_Plate-02-03.5; Durab\_Index-01-0063; React\_Pr\_3M-01-0.08%; LA\_Abrasion-05-23.2; Sulph\_Sd\_Mg-03-05.8; Rel Density-03-2.64; Absorption%-06-1.11; Other Tests-11-vary)

## ABSORPTION%:

The number and average of all results, expressed in terms of weight percentage, of all Absorption testing on samples from the deposit, in accordance with CSA standard A23.2-12A. (e.g. Absorption%-12-01.1)

## CLEANESS(C/F):

The number and average of all results of Cleaness of Aggregate testing on samples of coarse or fine aggregate from the deposit, in accordance with California Test Method 224. (e.g. Cleaness(C)-04-50.5)

## DURAB\_INDEX:

The number and average of all results of durability index testing on samples from the deposit. (e.g. Durab\_Index-03-65.3)

## LA\_ABRASION:

The number and average of all results, expressed in percentage weight loss, of Los Angeles (LA) Abrasion Testing on samples from the deposit, in accordance with CSA A23.2-16A. (e.g. LA Abrasion-03-26.3)

## ORGAN\_PLATE:

The number and average of all results, expressed in terms of reference plate number, of Organic Plate testing on samples from the deposit. (e.g. Organ Plate-05-03.2)

## ORG\_CONTENT:

The number and average of all results, expressed in terms of percentage weight loss, of Organic Content testing, in accordance with the Alaskan test method. (e.g. Org Content-12-00.5)

## SULPH\_SD\_MG/NA:

The number and average of all results, expressed in percentage weight loss, of all Sulphate Soundness (Magnesium or Sodium, Mg/Na) testing on samples from the deposit, in accordance with CSA standard A23.2-9A. (e.g. Sulph Sd Na-02-03.2)

## REACT\_PR/MB\_3M/GM/12/18:

The number and average of all results, expressed in terms of percentage expansion, of alkali-aggregate reactivity testing on concrete prisms, or mortar bars, after three, six, twelve or eighteen months, in accordance with CSA A23.2-14A-M77 or ASTM C-227, respectively. (e.g. React\_Mb\_3M-02-.085)

## REL\_DENSITY:

The number and average of all results, expressed in terms of saturated surface dry conditions, of all Relative Density testing on samples from the deposit, in accordance with CSA standard A23.2-12A. (e.g. Rel Density-12-2.62)

## MATERIAL QUANTITY:

-----  
Calculated and/or estimated volumes of granular material contained in the deposit, expressed in terms of DIAND-designated material classes, and in terms of confidence level of the quantities determined in accordance with the following definitions:

## CLASS:

DIAND has developed a simple classification system for granular resources, presented in the draft Territorial and Public Lands Pits and Quarries Regulations, which considers both the Unified Soil Classification of materials, and their most suitable end use. The quantity estimates should be given, where possible, in terms of each of the five material classes, as defined in each class field (see CP to CT, below), and in terms of the total (see CU) for the deposit.

## PROVEN VOLUME:

Material in each class whose occurrence, distribution, thickness and quality is supported with a high degree of confidence by ground truth such as geotechnical drilling, test pitting, and/or exposed stratigraphic sections. The thickness of material encountered in a borehole is usually extrapolated to a radius not exceeding 50 metres around the hole, with adjustments applied by assessing landform type and anticipated or known deposit homogeneity.

## PROBABLE VOLUME:

Material in each class whose existence and extent is inferred on the basis of several types of direct and indirect evidence, including topography, landform characteristics, airphoto interpretation, extrapolation of stratigraphy, geophysical data and/or limited sampling. Additional investigation is needed to determine a reliable material volume. The volume is estimated by projecting known parameters (typically those of proven resources) over the entire deposit, with adjustments for landform type, anticipated homogeneity and other site characteristics such as ice content and drainage.

## PROSPECTIVE VOLUME:

Material in each class whose existence is merely speculated on the basis of limited indirect evidence, such as airphoto interpretation and/or general geological considerations. The volume is typically estimated for the maximum areal extent of the deposit and the estimated relief of the geomorphic feature, with adjustments for anticipated site and deposit characteristics.

The material quantities are presented in the following format:  
CLASS:                   PROVEN/PROBABLE/PROSPECTIVE VOLUMES:

## CP - CLASS 1:

The calculated and/or estimated volumes of excellent quality granular material, consisting of clean, well-graded, structurally sound sands and gravels suitable for use as high quality surfacing materials, or as high quality asphalt or concrete aggregate, with a minimum of processing.

## CQ - CLASS 2:

The calculated and/or estimated volumes of good quality granular material, consisting of well-graded sands and gravels with varying, limited quantities of silt (fines), and suitable for use as good quality base and surface course aggregates, embankment or structure-supporting fill. May be suitable for production of concrete aggregate with extensive processing, except where deleterious material is present.

## CR - CLASS 3:

The calculated and/or estimated volumes of fair quality granular material, consisting of generally poorly-graded sands and gravels with or without substantial quantities of silt (fines), and suitable for fair quality general fill (subbase, base, embankment fill) for roads, flexible foundation pads, or lay-down yards.

## CS - CLASS 4:

The calculated and/or estimated volumes of poor quality granular material, consisting of generally poorly-graded, silty fine sands with minor gravels, with or without weak particles and deleterious materials, and suitable for marginal general (non-structural) fill.

## CT - CLASS 5:

The calculated and/or estimated volumes of fair to excellent quality bedrock, felsenmeer, talus or similar extremely coarse granular material, suitable for quarrying and processing to produce potentially excellent construction materials ranging from general fill, to concrete aggregate, building stone, and erosion control materials such as rip rap or armour stone.

## CU - TOTAL VOLUME:

The calculated and/or estimated volume of all of the above classes of granular materials potentially available in the deposit.

## CV - TOTAL RECOVERABLE:

The calculated or estimated volume of useable granular material from the deposit, based on the maximum areal extent of useable material in the deposit, and the anticipated maximum recoverable thickness, as determined from test pit and borehole information or inferred from assessment of deposit and site characteristics.

## CW - ANNUAL RECOVERABLE:

The calculated or estimated volume of material which is likely to be recovered in a single extraction season, based on the maximum areal extent of useable material in the deposit, and the anticipated maximum thickness of annual thawing of surficial materials, as determined from test pit and borehole information or inferred from assessment of deposit and site characteristics.

## CY - COMPILED BY:

The name of the contractor or person who originally compiled the database and a listing of contractors or persons who have subsequently undertaken significant updating of the content of the database (e.g. A. Compiler/Granular Resource Consultants Ltd./J. Doe)

## CZ - LAST UPDATE:

The date of the last update of the information presented for the subject granular materials deposit, presented in the format: yy-mm-dd. (e.g. 87-12-13)

CATALOGUE OF GRANULAR RESOURCE RELATED FIELD ACTIVITIES

DATA DICTIONARY  
-----

PART A: STUDY REFERENCE AND LOCATION  
-----

AA - STUDY NUMBER:

A unique study identifier number which will serve as a link to other databases (e.g. granular source inventory). This number consists of an alphabet prefix representing the database, to be assigned by INAC, a four digit study number, to be assigned by those preparing the database, and where necessary, a one digit sub-number to separate, for example, geophysical and geotechnical portions of the same study. (e.g. A-0137-1)

AB - YEAR:

The calendar year in which the majority of the field work on the study was completed. (e.g. 1983)

AC - SPONSOR:

The name of the company, department, agency or organization sponsoring the study. (e.g. Indian and Northern Affairs Canada, Yukon Department of Public Works, Gulf Canada, APOA, confidential)

AD - CONTACT:

The name of the person within the sponsoring organization who might be contacted to obtain additional information on the study and/or authorization for its use.

AE - CONTRACTOR:

The name of the prime contractor, consultant or group contracted by the sponsor to undertake the study (e.g. Ripley, Klohn Leonoff International Ltd, Northern Engineering Services Ltd., Geoterrex)

*add Contractor File No. ?*

LOCATION:

The location of the study will be identified using the Universal Transverse Mercator (UTM) co-ordinates of the southwestern and northeastern corners of a geographic block enclosing the study area. Separate data fields are included for the UTM zone and grid line of the minimum (western and southern) and maximum (eastern and northern) extremities of the block.

## AF - MINIMUM ZONE:

The UTM zone in which the southwestern corner of the enclosing block occurs. (e.g. 07)

## AG - MINIMUM EASTING:

The UTM grid line of the western extremity of the enclosing block. (e.g. 381987)

## AH - MINIMUM NORTHING:

The UTM grid line of the southern extremity of the enclosing block. (e.g. 7548335)

## AI - MAXIMUM ZONE:

The UTM zone in which the northeastern corner of the enclosing block occurs. (e.g. 08)

AJ - <sup>MAX</sup>~~MINIMUM~~ EASTING:

The UTM grid line of the western extremity of the enclosing block. (e.g. 567428)

AK - <sup>MAX</sup>~~MINIMUM~~ NORTHING:

The UTM grid line of the northern extremity of the enclosing block. (e.g. 7661560)

## AL - LOCATION MAP/PLAN NUMBER:

The map or plan number of any small scale accompanying regional map or trackplot which indicates the location of the study area, or series of separate detailed study/borrow sites or regional survey lines (e.g. A-00087.23).

## AM - LOCATION MAP/PLAN FORMAT:

The format or type of data containing the location of the study area, or series of separate detailed study/borrow sites or regional survey lines (e.g. digital 9-track; paper copy; mylar original, folded blue-line).

## AN - LOCATION MAP/PLAN SCALE:

The scale, expressed in terms of the representative fraction (e.g. 1:250,000) of any small scale accompanying regional map or trackplot which indicates the location of the study area, or series of separate detailed study/borrow sites or regional survey lines. The denominator only of the representative fraction is given since the numerator is consistently "1" (e.g. 250000)

## AO - LOCATION MAP/PLAN DIGITIZER NUMBER:

A unique five digit identifier number, to be assigned later by INAC, which identifies a data set of points, lines, or polygons to be digitized from the location plan. This number links the study catalogue database to INAC's spatial database system. (e.g. 23467)

## AP - LOCATION MAP/PLAN ARCHIVING:

The general availability and, where appropriate, specific location of storage of any map or plan number of any small scale accompanying regional map or trackplot which indicates the location of the study area, or series of separate detailed study/borrow sites or regional survey lines (e.g. sponsor/contractor in-house, private/public repository, government agencies, name of contact).

## AQ - SITE PLAN(S) NUMBER(S):

The map or plan number(s) of up to six larger scale accompanying local maps, site plans or trackplots which indicate the location of individual detailed study/borrow sites, boreholes/ testpits/grab samples or detailed survey grids for separate study/borrow sites within the main study area (e.g. A-00087.23/00345-34.00/0000000001/0000023-A3/T100089.34/no number.).

## AR - SITE PLAN(S) FORMAT(S):

The format(s) or type(s) of up to six larger scale accompanying local maps, site plans or trackplots which indicate the location of individual detailed study/borrow sites, boreholes/ testpits/grab samples or detailed survey grids for separate study/borrow sites within the main study area (e.g. digital 9-track; paper copy; mylar original, folded blue line).

## AS - SITE PLAN(S) SCALE(S):

The scale(s), expressed in terms of the representative fraction(s) (e.g. 1:50,000, 1:10,000) of up to six larger scale accompanying local maps, site plans or trackplots which indicate the location of individual detailed study/borrow sites, boreholes/ testpits/grab samples or detailed survey grids for separate study/borrow sites within the main study area. The denominator only of the representative fraction is given since the numerator is consistently "1" (e.g. 50000/10000)

## AT - SITE PLAN(S) DIGITIZER NUMBER(S):

A unique five digit identifier number or series of numbers, to be assigned later by INAC, which identifies a data set of points, lines, or polygons to be digitized from the site plans. This number links the study catalogue database to INAC's spatial database system.

## AU - SITE PLAN(S) ARCHIVING:

The general availability and, where appropriate, specific location of storage of up to six larger scale accompanying local maps, site plans or trackplots which indicate the location of individual detailed study/borrow sites, boreholes/ testpits/grab samples or detailed survey grids for separate study/borrow sites within the main study area (e.g. sponsor/contractor in-house, private/public repository, government agencies, name of contact).

PART B: STUDY DETAILS  
-----

## BB - STUDY TYPE:

The type of data collected during the study or sub-study (e.g. hydrographic, geophysical, seabed sampling, geotechnical, dredging)

## BC - STUDY SCOPE:

The areal scope of the study or sub-study (e.g. regional, site specific - single site, many sites)

## BD - SURVEY LEVEL:

The general purpose or level of detail of the study (e.g. airphoto interpretation, reconnaissance, exploration, delineation, production)

## BE - STUDY SIZE:

The extent or size of the study in terms of number of potential borrow sites identified, number of testpits or boreholes, or total number of line kilometers of geophysical data. (e.g. 21 sites; 55 BH's; 145 km)

## BF - SURVEY PATTERN:

The pattern in which the individual borrow sites within the study area occur, or in which boreholes or survey lines within specific detailed study sites were laid out. (e.g. random, corridor, line, grid)

## BG - SURVEY SPACING:

The relative (e.g. random, wide) or actual (range and/or average) spacing of the survey data or study sites. (e.g. 250 m E-W, 500 m N-S; 10 - 15 km)

## BH - PROGRAM LENGTH:

The length, in days and shifts, of the field data collection or survey program. (e.g. 14-21)

## BI - SEASON:

The season of the year in which the field data collection or survey program was conducted. (e.g. late summer, winter)

## BJ - EQUIPMENT TYPE:

The type(s) of equipment used to collect data or obtain samples. (e.g. hand-excavated testpits; D8 cat; sonic drill; boomer, side-scan and sub-bottom profiler; clam)

## BK - PENETRATION:

The relative (e.g. poor, shallow, variable) or actual (range and/or average) penetration of geophysical records or drilling equipment. (e.g. 5-7.5-10)

## BL - RESOLUTION:

The suitability of the data for distinguishing variations in subsurface stratigraphy, expressed in relative (e.g. poor, variable, unknown) or actual (e.g. range and/or average in tenths of metres) terms. (e.g. 0.5)

## BM - SAMPLING/RECORDING RATE:

The relative (e.g. continuous, intermittent, slow) and/ or actual rate of sampling or recording. (e.g. samples at 1 m intervals; chart speed)

## BN - SAMPLE/RECORD QUALITY:

A description of the relative overall quality or range in quality of the data, samples or records with regard to its use for determining subsurface stratigraphy and/or borrow quality. (e.g. sonic core - disturbed, but stratigraphically intact; augering with 1.5 m runs; side scan right channel intermittently operating; frequent acoustic voids)

## BO - SAMPLE/RECORD TYPE(S):

Additional details on the type(s) of samples (e.g. 75 mm diam. CRREL core, 1-2 kg grab samples, 100 mm sonic casing) or records (e.g. analog, digital, depth corrected) obtained with the indicated types of equipment.

## BP - SAMPLE SIZE:

The total number(s) of samples obtained during the study, by type, where appropriate. (e.g. 75 grabs, 15 CRREL core)

## BQ - INTERPRETATION/TESTING LEVEL:

The extent of laboratory testing of samples (e.g. routine classification testing only, concrete aggregate suitability testing); or the level of detail of the interpretation of geophysical records (e.g. field, preliminary, detailed) or geotechnical data (e.g. pit plans for 3 sources), as appropriate.

## BR - REPORT LEVEL:

The type or level of detail of any report(s) resulting from the study. (e.g. annotated records, field logs/report only, summary/data compilation report, formal geophysical interpretation/ geotechnical evaluation report)

## BS - REPORT DISTRIBUTION:

The extent of distribution and/or general availability of any reports resulting from the study. (e.g. internal, sponsor/contractor only, specific government departments/agencies/libraries, published)

## BT - DATA ARCHIVING:

The general availability and, where appropriate, specific location of storage of raw data obtained during the study. (e.g. sponsor/contractor in-house, private/public repository, government agencies).
