The database for this Directory was compiled as of March 1999, and it is recognized that some entries already are out of date. Readers are encouraged to submit comments on the usefulness of the Directory, and suggestions for improving it, to the above address. The staff at GeoNorth Ltd. would like to thank all those interviewed for their time and information and wish to express their apologies for any errors or omissions.

PREFACE

The roles and responsibilities of governments and institutions in the North are evolving rapidly as a result of land claims and self-government agreements, devolution to the territorial governments and the creation of a new territory, Nunavut. New institutions of public government with responsibilities for land use planning and resources management are being created pursuant to land claims settlements. Resource management boards have or will assume from DIAND many of its historical regulatory authorities. However, DIAND will still have residual responsibilities for managing remaining federal lands in a way that complements the activities of the new institutions and governments. This includes, as a specific component of DIAND's sustainable development strategy, continuing to develop a program for the effective management of granular resources.

DIAND's sustainable development strategy also includes a number of the objectives, targets and specific actions that will require or encourage the identification of stakeholders and interest groups. These include strengthening partnerships with other organizations, increasing opportunities for northerners to participate in decisions that affect their future, collaborating with others, increasing the capacity of northerners to benefit from development opportunities, improved consultation, ensuring transparency and inclusiveness as a key to effective communication with northerners. For the Northern Granular Resources Program to meet its goals with respect to the Department's commitment to foster sustainable development in the North, there is a need for a better understanding of the range of organizations and individuals affected by granular resource management actions and decisions.

Separate directories for the Northwest Territories, Nunavut and Yukon have been prepared under contract to DIAND. This series attempts to compile information on government and non-governmental organizations and individuals, owners, operators, service providers involved with, or affected by, any or all aspects of the identification, exploration, regulation, development, management and use of granular resources in Canada's northern territories. While care was taken to ensure that the information was accurate and current at the time of compilation, it is inevitable that there will be changes or additions. Users of this directory are encouraged to forward any new information to either of the addresses provided on the back of the title page.

MAP AND KEY DEFINITIONS: DIAND Resource Management Areas - Nunavut	(back cover)
--	--------------

INTRODUCTION

The Northern Affairs Program (NAP) of the federal Department of Indian Affairs and Northern Development (DIAND) has overall responsibility for the control and administration of wide range of natural resources in the North. This includes the responsibility to ensure that resource development benefits all Canadians while reducing damage to the environment and enhancing the lifestyles of all northern residents. Granular resources are necessary for most development projects in the North.

Ownership of land in the North generally includes ownership of granular resources - soil, sand, gravel and certain types of rock that are required for land development and are accessible from the land surface in pit and quarry operations. Generally, through the *Department of Indian Affairs and Northern Development Act*, the federal government has an overall responsibility for resources in the North, as well as residual responsibility for remaining federal lands. In Nunavut, there are four categories of land ownership.

- ◆ Crown lands (federal lands administered by DIAND)
- ◆ Commissioner's lands (federal lands administered by the Nunavut government)
- ◆ Inuit-owned lands (lands administered by the designated Inuit organization)
- ◆ Municipal lands (lands administered by the municipality or the Nunavut government)

The laws and regulations affecting the taking and use of granular resources, and the process for obtaining authorizations, vary across the North, and depend also on land ownership.

It is imperative that the needs of a wide array of stakeholders and interest groups be considered in order to properly develop and manage these important resources. Consequently, DIAND has attempted to compile, verify and update information on all stakeholders involved in granular resources. What follows is a comprehensive directory of those involved with any or all aspects of the identification, exploration, regulation, development, management and use of granular resources within Nunavut.

How to use this Directory

The Directory includes three parts.

The **first** part includes key definitions and a brief overview of the laws, regulations and application process applicable to the various land ownership categories, including key regulatory contacts.

The **second** part consists of listings of stakeholders grouped into four main categories and several sub-categories. At the beginning of the listing is a brief explanation of the categories and its sub-categories. The main categories are as follows:

- ◆ **Regulators;**
- ◆ **Development and Use;**
- ◆ **Services; and**
- ◆ **Reference**

Each stakeholder listing includes (as available) name, position title and organization, mailing and e-mail addresses, telephone and fax numbers and several keywords that describe the stakeholder's role or interest in granular resources.

The **third** part contains three indexes of the stakeholders included in the directory and the page on which their full entry is included. The first index lists organizations that are grouped alphabetically under subject categories that generally correspond to those in the second part of the directory. The second is an alphabetical listing of all organizations in the directory. The final index is an alphabetical listing of all persons in the directory.

ACTS & REGULATIONS AFFECTING PITS & QUARRIES

The following is a brief list of the major Acts and Regulations that apply to pit and quarry development in Nunavut:

- ◆ *Territorial Lands Act, Territorial Land Use Regulations, Territorial Quarrying Regulations,*
- ◆ *Commissioner's Land Act and Commissioner's Land Regulations*
- ◆ *Fisheries Act,*
- ◆ *NWT Waters Act, and*
- ◆ *Mine Safety Ordinances and Rules.*

The *Nunavut Land Claims Agreement* provided the Inuit with title to a large quantity of land (approximately 350,000 square kilometers). This land is no longer governed by the *Territorial Lands Act*. The Inuit issue access licences, including quarry licences, under their own land management rules, and should be contacted directly to obtain the most current requirements.

Crown Lands

The district manager of the DIAND District Office is responsible for regulation of land use activities on Crown lands in Nunavut. The statute for governing the removal and disposal of granular materials is the *Territorial Lands Act*, which is the enabling legislation for two key regulations: *Territorial Land Use Regulations* and *Territorial Quarrying Regulations*. If exploratory work is required to investigate a potential pit or

quarry site, a land use permit is required before undertaking such work. Prior to removing any granular materials on Crown lands in this region, a developer must obtain both a quarry permit and land use permit from DIAND.

A **land use permit** authorizes temporary use of land for activities associated with a quarry activity for periods of less than three years. Land use permits are designed to minimize environmental disturbance and contain conditions regarding environmental protection, location and area, timing of operation, type and size of equipment, abandonment and clean-up. A security deposit is required.

A **quarry permit** authorizes a person to remove a specific amount of material from specific lands. Permits expire when the quantity of material or substance mentioned in the permit has been quarried or removed or on the expiry of one year from the date of issue, whichever is earlier. The permit requires the payment of royalties and fees, based on the amount of material to be removed estimated on the permit. Money is refunded if less than the full amount of material is used.

A developer may obtain a **quarry lease**, once the lands containing the deposits are staked, if use of the resource will be required over several years.

Further information concerning the regulations and procedures can be obtained from sources listed in this Directory under Regulators and Reference. All relevant Acts and Regulations may be obtained from DIAND offices and web site www.inac.gc.ca/legisl/legisl.html. Key documents include "Environmental Guidelines: Pits and Quarries" and the "Administrative Guide" (available at DIAND offices), as well as "Jurisdictional Responsibilities for Land Resources, Land Uses and Development in the Yukon Territory and Northwest Territories" (available at DIAND offices and web site www.inac.gc.ca/pubs/jrlr/index.html).

For applications and information on sand and gravel extraction, contact the following office:

DEPT. OF INDIAN AFFAIRS AND NORTHERN DEVELOPMENT (DIAND)

Nunavut District, District Manager

P.O. Box 100, Iqaluit, NU X0A 0H0

Phone: (867) 979-4405 Fax: (867) 979-6445

Inuit Owned Lands

As a result of the *Nunavut Land Claims Agreement*, Inuit gained title to a vast amount of land in Nunavut. Title to this land was transferred to the Designated Inuit Organizations (DIO), which are the three regional Inuit associations. The DIOs have their own rules and are patterned on the procedures used by DIAND in respect to the management and use of granular materials.

All "third party interest" requires a **land use licence** and a **quarry licence** prior to the removal of any "specified substances" which includes sand and gravel. "Third party interest" is defined as any person excluding government, Inuit or any DIO. The *Nunavut*

Land Claims Agreement contains various conditions on rights, fees and royalties payable by the third party to the DIO. Government agents must also be licenced by the appropriate DIO for removal of sand and gravel. If a dispute should arise concerning licence rejection, fees or compensation, the third party, DIO or government may refer to the Nunavut Surface Rights Tribunal for a resolution.

For information about sand and gravel applications and information, contact the appropriate regional DIO:

Commissioner's Land

Commissioner's lands are federal lands for which control and administration has been transferred to the Commissioner of Nunavut. These lands are usually in and around communities and also include highways and roads on public land. The Department of Community Government and Transportation within the Government of Nunavut manages Commissioner's lands. Under the *Commissioner's Land Act* and regulations, the department accepts and processes land use applications. Developers may apply for a quarrying lease for the granular deposit, generally if use of the resource will be required over a relatively long time period. Over shorter time periods (one or two years) the development of the deposit requires a quarry permit. Leases and permits authorize the removal of granular materials and specify the fees and royalties to be paid under the *Commissioner's Land Regulations*.

Municipal Lands

This includes all lands within a municipal boundary, but excluding: Inuit owned lands; most Crown lands; Commissioner's lands; lands owned in fee simple, and mines and minerals other than granular and quarry materials. Under the Nunavut Land Claim Agreement, lands within the municipal boundaries are being transferred to the municipal corporation, but as yet, activities related to quarries on municipal lands are administered and controlled by the Commissioner for the use and benefit of the local municipality, and generally follow the process described for Commissioner's land. Municipalities are consulted before any quarry permits or leases are issued on municipal lands. Through quarry or land administration agreements, administrative control of quarry permits and leases may be given to the municipality. The *Commissioner's Land Act and Regulations*

apply to all land use activities on municipal lands and approval from the local municipality is required for both quarry leases and permits.

For information on sand and gravel or to be directed to the local municipality contact the appropriate office:

Phone: (867) 975-4500 Fax: (867) 975-4560

APPLICATION & REVIEW PROCESS

Most land within Nunavut is designated as Crown or Inuit-owned lands. All land use and quarry permit applications are received and issued by DIAND for Crown land and by the DIO for Inuit-owned lands. The municipality or the Nunavut government receives and issues permits for municipal and Commissioner's lands.

Crown Land

If site investigation is required to explore the potential of a pit or quarry, a land use permit is required for this activity. If the site is to be developed, both a quarry permit and land use permit is required.

When an application for a land use permit is received by DIAND, it is first checked for completeness. All fees are paid when the application is submitted. If the application is accepted, it is forwarded to the Nunavut Impact Review Board for environmental impact assessment.

In the case of a quarry permit, the application fee and all royalty fees (determined by the volume indicated on the quarry permit application) must be paid at the time of application. Should the applicant take less material than applied for, refunds of royalty fees will be made upon notification and confirmation.

Once a land use permit has been issued, DIAND Resource Management Officers conduct inspections during the operation to monitor compliance with the terms and conditions of the permits. Copies of inspection reports are forwarded to the Permittee. Should an inspector determine that a Permittee is not complying with their permit, enforcement action can be taken, including cancellation of the permit and litigation.

Inuit-Owned Lands

The application process is similar to the process outlined above with the following exceptions. The DIO would receive and accept or reject the application. All fees and royalties would be payable to the DIO. The environmental impact assessment of the application may be done by the DIO or referred to the Nunavut Impact Review Board.

Once a land use permit has been issued, staff from the DIO may conduct inspections during the operation to monitor compliance with the terms and conditions of the permits.

Commissioner's and Municipal Lands

Land within this designation would comprise only a small portion of the land base in Nunavut. However, for Commissioner's or municipal lands the Government of Nunavut, department of Community Government and Transportation would normally receive the application. Fees are paid at the time of application. For Commissioner's lands within municipal boundaries and municipal lands, the application is referred to the hamlet for environmental impact assessment. If a permit is applied for on Commissioner's land outside of municipal boundaries, the application is referred to the Nunavut Impact Review Board for environmental impact assessment.

Once a permit has been issued, staff from Community Government and Transportation conducts inspections during the operation of the quarry or pit to monitor compliance with the terms and conditions of the permits.

REGULATORS

Applications for permit use of granular resources must be given to the appropriate agency, based on the designation of the land concerned.

PERMIT APPLICATION

Inuit Owned Land, apply to the appropriate Inuit Association;

Commissioner's & Municipal Land, apply to the appropriate Dept. of Community and Municipal Affairs, Government of Nunavut;

Crown Land, apply to Dept. of Indian Affairs & Northern Development, Nunavut District Office, Government of Canada.

REVIEW PROCESS

Agencies, including the Inuit, co-management, and government that may be involved in some aspect of the screening and reviewing of applications.

DIAND RESOURCE MANAGEMENT AREAS - NUNAVUT

KEY DEFINITIONS

A **pit** is any site where unconsolidated earth materials such as topsoil, sand and/or gravel resources are extracted. Since sand and gravel deposits are often found together, both can usually be extracted from the same pit.

Extraction and processing activities are similar for sand and gravel operations. Pit depths vary but rarely exceed 5 to 7 metres. Pit sizes typically range from 1 to 2 hectares (ha) but occasionally are larger, involving 10 to 20 ha or more. Most sand and gravel pits are located near the site where the materials will eventually be used, because the major cost of supply is in the transportation required.

Quarries are any sites used for the extraction of building products or construction material from bedrock, such as

limestone, shale, sandstone, or granite. Quarries may also be used as to manufacture crushed rock or other specific types of aggregate.

Borrow pits are often excavated to provide low quality fill for construction activities such as roadbed building and landscaping. Fill of this type is usually removed from a nearby borrow pit and then compacted on the site as a base for other construction.

Clay and marl pits are usually opened for special situations. As clay can help reduce seepage, it is often used to line dugouts, water reservoirs, sewage lagoons or ditches. Marl or bog lime may be used to reduce the acidity of soils or waters and is often added to mine tailing ponds.
