Attention: Dr. Scott Dallimore

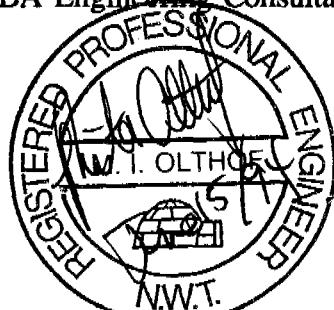

Dear Sir:

Subject: Report Catalogue and Borehole Databases  
Tuktoyaktuk, Northwest Territories

As requested by the Geological Survey of Canada (GSC), EBA Engineering Consultants Ltd. (EBA) has completed compilation of databases for Tuktoyaktuk, Northwest Territories. This report summarizes the project activities and describes the databases compiled and data presentation.

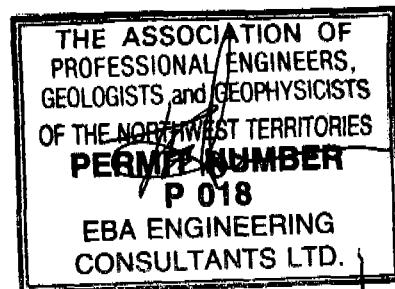

We have appreciated this opportunity to provide engineering services for GSC and we trust that this report and databases satisfy your present requirements. If you have questions, please contact the undersigned or Mr. Ed Hoeve, P.Eng.

Yours truly,  
EBA Engineering Consultants Ltd.

Rita I. Olthof, P.Eng.  
Project Engineer

## 1.0 INTRODUCTION

As requested by the Geological Survey of Canada (GSC), EBA Engineering Consultants Ltd. (EBA) has completed compilation of databases for Tuktoyaktuk, Northwest Territories. This report summarizes the project activities and describes the databases compiled and data presentation. The work comprises the Phase 1 and 2 workscopes as described in our letter of March 2, 1994. As well, EBA has provided hard copies of specific reports of interest to GSC.

A report catalogue comprising 45 report entries was compiled for the project. Of these, 29 reports contain onshore boreholes within or near the community of Tuktoyaktuk, are related to access and borrow offshore in Tuktoyaktuk Harbour or Channel, or were prepared for offshore projects along the Tuktoyaktuk Peninsula. The remaining reports discuss onshore granular resources within a 60 km radius of Tuktoyaktuk. Some of the report entries were extracted from existing databases. The origins of these databases are summarized in this report.

Several borehole databases were compiled, mostly comprising boreholes extracted from previously existing databases. A 60 km radius from Tuktoyaktuk was used to extract the boreholes, except where GSC had indicated an interest in boreholes beyond that distance along the Tuktoyaktuk Peninsula. As well, boreholes at considerable distance offshore were omitted. The origins of the borehole databases are summarized in this report.

## 2.0 PROJECT ACTIVITIES

### 2.1 COLLECT DATA

EBA greatly appreciates the efforts of those who assisted in the collection of data. Data was obtained from several sources:

- EBA's Edmonton, Yellowknife and Whitehorse office files,
- Indian and Northern Affairs Canada, Hull, Quebec (Mr. R.J. Gowan, P.Geol.),
- Geological Survey of Canada, Ottawa, Ontario (Mr. J.A. Heginbottom),
- Government of the Northwest Territories, Department of Public Works and Services, Yellowknife, N.W.T. (Ms. C. Melton),
- Government of the Northwest Territories, Economic Development and Tourism, Inuvik, N.W.T., (Mr. J. Cournoyea),
- Northwest Territories Power Corporation (Mr. T. O'Neill), and
- Public Works Canada, Edmonton, Alberta (Messrs. E. Pohranychny and S. Sahmy).

## 2.2 EXTRACTION AND COMPIRATION OF DATA FOR REPORT CATALOGUE

To create the report catalogue for Tuktoyaktuk, the structure of the report catalogue database was copied from the existing Mackenzie Valley report catalogue. Then, report entries with location coordinates within 60 km of Tuktoyaktuk were copied from the Mackenzie Valley report catalogue into the Tuktoyaktuk report catalogue. This resulted in two catalogue entries. Similarly, report catalogue entries were extracted from the existing Beaufort Sea report catalogue database, resulting in an additional nine entries. The remaining entries were entered manually from reports collected specifically for this project.

The Mackenzie Valley and Beaufort Sea report catalogues were originally prepared by EBA for Indian and Northern Affairs Canada (INAC) in 1988, with several followup projects to update and standardize the databases in subsequent years. The bibliography lists the reports which describe the most recent updates of these databases. EBA's report "Mackenzie Valley Transportation Corridor, Granular Resources Databases, Northwest Territories, Canada, 0101-11085, December, 1992" is the most recent update for the Mackenzie Valley report catalogue databases. EBA's report "Canadian Beaufort Sea, Geotechnical and Geophysical Databases, 0101-11085, February, 1993" is the most recent update for the Beaufort Sea report catalogue. Those reports should be referred to for details of the original databases and provide background information for the new Tuktoyaktuk report catalogue described here.

The final report catalogue comprises 45 report entries. Of these, 29 reports contain onshore boreholes within or near the community of Tuktoyaktuk, are related to access and borrow offshore in Tuktoyaktuk Harbour or Channel, or were prepared for offshore projects along the Tuktoyaktuk Peninsula. The remaining reports discuss onshore granular resources within a 60 km radius of Tuktoyaktuk.

Table 1 presents a summary of abbreviations used for contractor's names which appear in the report catalogue database. Table 2 lists abbreviations used for area names, and Table 3 shows abbreviations used for sample types. Appendix A presents a summary listing of the report catalogue entries and a printout of each entry. These can be printed using the program R&R XBase Version 2.0 for Windows, library "tukcat.rp5", reports "CATSUMMARY" AND "TUKTOYAKTUK", respectively.

## 2.3 EXTRACTION AND COMPILATION OF DATA FOR BOREHOLE DATABASES

Several borehole databases were compiled, mostly comprising boreholes extracted from previously existing databases. A 60 km radius from Tuktoyaktuk was used to extract the boreholes, except where GSC had indicated an interest in boreholes beyond that distance along the Tuktoyaktuk Peninsula. As well, boreholes at considerable distance offshore were omitted.

The borehole databases were extracted from a database for the Inuvialuit Lands Agreement area ("INAC" database), containing 224 boreholes, a database for the Mackenzie Valley ("MACKENZI" database), containing 244 boreholes, and a database for the Beaufort Sea ("BEAU93AL" database), containing 109 boreholes. As well, 10 new boreholes were compiled from two recent geotechnical evaluations in Tuktoyaktuk, one for a new NorthwesTel tower (EBA, 1992) and one for the Inuvialuit Interpretation Centre (Thurber, 1992).

The borehole databases have been maintained as separate databases due to the differences in format. In particular, the Beaufort Sea borehole databases are run by the "Standard" ESEBase program, while the onshore borehole databases are run by the "Mackenzie" ESEBase program. The new boreholes are also in the "Mackenzie" ESEBase format. The other primary difference is that the "MACKENZI" database was compiled using the Imperial measurement system, whereas the "INAC", Beaufort Sea and new databases were compiled using the Metric measurement system. To convert all of the boreholes to a consistent format was beyond the scope of the present assignment. However, some errors in the original conversion of the "INAC" database to Metric were observed, and the boreholes extracted for the Tuktoyaktuk databases were corrected. As well, duplicate borehole logs between boreholes extracted from the "INAC" and "MACKENZI" databases were deleted, preserving the logs obtained from "MACKENZI".

The "INAC" and Beaufort Sea databases were originally compiled by EBA for INAC in 1987 and 1988, respectively, with additions made to the Beaufort Sea databases for INAC in subsequent years and as recently as 1993. The Mackenzie Valley borehole database was initially compiled into ESEBase by EBA from GSC's Open File Report No. 350 in 1990, and modified by EBA in 1993. EBA's reports "Canadian Beaufort Sea, Geotechnical and Geophysical Databases, 0101-11085, February, 1993" and "Corrections and Additions to ESEBase Mackenzie Valley Geotechnical Databases, Phases I and II, 0101-11148, March, 1993", provide information on the most recent updates of the borehole databases. As well, EBA's report "Inuvialuit Settlement Sand and Gravel Inventory and Recommendations for Development, Tuktoyaktuk, April, 1987" provides background information for the "INAC" borehole database.

The boreholes extracted from the Beaufort Sea database and the new boreholes are linked by the study number to the report catalogue. The boreholes extracted from the "INAC" database are not yet linked by study number to the report catalogue, but UTM grid locations can be used as links between the databases. The boreholes extracted from "MACKENZI" have been given study numbers, but the reports from which they were derived were not available for the report catalogue.

Tables 1 through 3 provide information on abbreviations used in the borehole databases. Appendix B presents a sample borehole log and USC descriptions. ESEBase has built-in log printing facility.

### 3.0 DATABASE PRESENTATION

The Tuktoyaktuk report catalogue and borehole databases are presented on two 3.5" floppy diskettes, attached in Appendix C of this report. Instructions for installing the databases onto a computer hard drive are included with the diskettes.

The diskette copy includes the "TUK94IN" report catalogue database and R&R XBase library "tukcat.rp5". These will be restored to directory "tuktoyak". Also included are the borehole databases: "TUK94INC" (extracted from "INAC"), "TUK94MAC" (extracted from "MACKENZI"), "TUK94NEW" and "TUK94BFT" (extracted from "BEAU93AL"). The first three databases listed are in "Mackenzie" ESEBase format and will be restored under directory name "ESEBASE". Since the "TUK94BFT" boreholes are in "Standard" ESEBase format, it will be restored under directory name "ESEBEAU" with the standard ESEBase program, instead of in "ESEBASE". This will allow both versions of ESEBase to exist simultaneously on the same hard drive.

### 4.0 RECOMMENDATIONS FOR FURTHER WORK

Some recommendations for further work specific to the "MACKENZI" borehole database were provided in EBA's 1993 report to GSC. These recommendations also apply to the new Tuktoyaktuk borehole databases and the extracted Beaufort Sea borehole logs. As well, we have observed that the "INAC" database produced in 1987 referenced "SPONSOR", "CONTRACTOR", and "PROJECT NUMBER" to the database project, rather than the original projects. This should be corrected. As well, not all boreholes in the databases are named according to the convention established in earlier database projects. These could be changed in a future update of the databases.

In future, the "TUK94BFT" database could be converted to "Mackenzie" ESEBase format, and the "TUK94INC" database could be converted to the Metric measurement system. Then, all of the databases could be combined if desired. However, there are some advantages to keeping databases separate, for example, to separate onshore and offshore boreholes.

The "Mackenzi" database format may need some additional testing and/or debugging to ensure that when logs are copied to new databases using search scopes that all data copies to the new database.

## BIBLIOGRAPHY OF RELATED DATABASE PROJECTS

Canadian Beaufort Sea, Geotechnical and Geophysical Databases, prepared by EBA for INAC, 0101-11085, February, 1993

Corrections and Additions to ESEBase Mackenzie Valley Geotechnical Databases, Phases I and II, prepared by EBA for GSC, 0101-11148, March, 1993

Inuvialuit Settlement Sand and Gravel Inventory and Recommendations for Development, Tuktoyaktuk, prepared by EBA for INAC, 0101-4575, April, 1987

Mackenzie Valley Transportation Corridor, Granular Resources Databases, Northwest Territories, Canada, prepared by EBA for INAC, 0101-11085, December, 1992

## BIBLIOGRAPHY OF PROJECTS WITH BOREHOLES ADDED TO "TUK94NEW" DATABASE

Geotechnical Engineering Report, NorthwesTel's Multi-Departmental Mobile Radio and Digital Microwave Project, Phases I and III, Dempster Highway, Yukon/NWT, prepared for NorthwesTel Inc. by EBA, 0201-10705, January, 1992.

Proposed Inuvialuit Interpretation Centre, Tuktoyaktuk, NT, Geotechnical Investigation, prepared for Government of Northwest Territories, Department of Public Works by Thurber Engineering Ltd., 15-22-166, March, 1992.

SURVEY PATTERN: GRID

SURVEY SPACING: N/A

SEASON: WINTER

PROGRAM LENGTH: 3 DAYS (MARCH 28-30)

EQUIPMENT : TEXOMA 8-35 DRILL WITH 300 mm DIAMETER AUGERS

PENETRATION: 10.0-10.1-10.23M

RESOLUTION : POOR TO GOOD

INFORMATION ON SAMPLES OR SURVEY RECORDS:

RATE : CONTINUOUS MONITORING OF PILE HOLE CUTTINGS

QUALITY: FAIR

TYPE : BULK DISTURBED

SIZE : NO SAMPLES TAKEN FOR TESTING

LEVEL OF DETAIL: INTERPRETATION/ANALYSIS/REPORTING:

INTERP : CONFIRMATION OF SOIL TYPE AND DEPTH FOR PILE INSTALLATION

REPORT : PILE INSTALLATION LOGS (NOT KNOWN IF A FORMAL SUMMARY REPORT EXISTS YET)

DISTRIB: SPONSOR/CONTRACTOR

OTHER : N/A

ARCHIVING OF INFORMATION:

REPORT : SPONSOR/CONTRACTOR

# UNIFIED SOIL CLASSIFICATION

MAJOR DIVISIONS		GROUP SYMBOLS	TYPICAL NAMES	CLASSIFICATION CRITERIA	
COARSE-GRAINED SOILS  FINE-GRAINED SOILS  HIGHLY ORGANIC SOILS	More than 50% retained on No. 200 sieve*  50% or more passes No. 200 sieve*  Liquid limit greater than 50%	GRAVELS 50% or more of coarse fraction retained on No. 4 sieve	GW	Well-graded gravels and gravel-sand mixtures, little or no fines	$C_u = D_{60}/D_{10}$ Greater than 4 $C_c = \frac{(D_{30})^2}{D_{10} \times D_{60}}$ Between 1 and 3  Not meeting both criteria for GW
			GP	Poorly-graded gravels and gravel-sand mixtures, little or no fines	
			GM	Silty gravels, gravel-sand-silt mixtures	
			GC	Clayey gravels, gravel-sand-clay mixtures	
		SANDS More than 50% of coarse fraction passes No. 4 sieve	SW	Well-graded sands and gravelly sands, little or no fines	Classification on basis of percentage of fines GW, GP, SW, SP GM, GC, SM, SC Borderline classification requiring use of dual symbols  $C_u = D_{60}/D_{10}$ Greater than 6 $C_c = \frac{(D_{30})^2}{D_{10} \times D_{60}}$ Between 1 and 3  Not meeting both criteria for SW
			SP	Poorly-graded sands and gravelly sands, little or no fines	
			SM	Silty sands, sand-silt mixtures	
			SC	Clayey sands, sand-clay mixtures	
		SILTS AND CLAYS Liquid limit 50% or less	ML	Inorganic silts, very fine sands, rock flour, silty or clayey fine sands	Classification on basis of percentage of fines Less than 5% pass No. 200 sieve More than 12% pass No. 200 sieve 5% to 12% pass No. 200 sieve  Atterberg limits plot below 'A' line or plasticity index less than 4 Atterberg limits plot above 'A' line and plasticity index greater than 7  Atterberg limits plotting in hatched area are borderline classifications requiring use of dual symbols
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays	
			OL	Organic silts and organic silty clays of low plasticity	
			MH	Inorganic silts, micaceous or diatomaceous fine sands or silts, elastic silts	
			CH	Inorganic clay of high plasticity, fat clays	
			OH	Organic clays of medium to high plasticity	
PT		Peat, muck and other highly organic soils		*Based on the material passing the 3 in. (75 mm) sieve †ASTM Designation D 2487, for identification procedure see D 2488	

## GROUND ICE DESCRIPTION

### ICE NOT VISIBLE

GROUP SYMBOLS	SYMBOLS	SUBGROUP DESCRIPTION	
N	Nf	Poorly-bonded or friable	
	Nbn	No excess ice, well-bonded	
	Nbe	Excess ice, well-bonded	

**NOTE:**

1. Dual symbols are used to indicate borderline or mixed ice classifications
2. Visual estimates of ice contents indicated on borehole logs  $\pm 5\%$
3. This system of ground ice description has been modified from NRC Technical Memo 79, Guide to the Field Description of Permafrost for Engineering Purposes

**LEGEND**

Soil

Ice

### VISIBLE ICE LESS THAN 50% BY VOLUME

GROUP SYMBOLS	SYMBOLS	SUBGROUP DESCRIPTION	
V	Vx	Individual ice crystals or inclusions	
	Vc	Ice coatings on particles	
	Vr	Random or irregularly oriented ice formations	
	Vs	Stratified or distinctly oriented ice formations	

### VISIBLE ICE GREATER THAN 50% BY VOLUME

ICE	ICE + Soil Type	Subgroup Description	
	ICE	Ice with soil inclusions (greater than 25 mm (1 in.) thick)	

## TERMS USED ON BOREHOLE LOGS

### TERMS DESCRIBING CONSISTENCY OR CONDITION

**COARSE GRAINED SOILS** (major portion retained on 0.075mm sieve): includes (1) clean gravels and sands, and (2) silty or clayey gravels and sands. Condition is rated according to relative density, as inferred from laboratory or in situ tests.

DESCRIPTIVE TERM	RELATIVE DENSITY	N (blows per 0.3m)
Very Loose	0 to 20%	0 to 4
Loose	20 to 40%	4 to 10
Compact	40 to 75%	10 to 30
Dense	75 to 90%	30 to 50
Very Dense	90 to 100%	greater than 50

The number of blows, N, on a 51mm O.D. split spoon sampler of a 63.5kg weight falling 0.76m, required to drive the sampler a distance of 0.3m from 0.15m to 0.45m.

**FINE GRAINED SOILS** (major portion passing 0.075mm sieve): includes (1) inorganic and organic silts and clays, (2) gravelly, sandy, or silty clays, and (3) clayey silts. Consistency is rated according to shearing strength, as estimated from laboratory or in situ tests.

DESCRIPTIVE TERM	UNCONFINED COMPRESSIVE STRENGTH (kPa)
Very Soft	Less Than 25
Soft	25 to 50
Firm	50 to 100
Stiff	100 to 200
Very Stiff	200 to 400
Hard	Greater Than 400

NOTE: Slickensided and fissured clays may have lower unconfined compressive strengths than shown above, because of planes of weakness or cracks in the soil.

### GENERAL DESCRIPTIVE TERMS

- |               |   |
|---------------|---|
| Slickensided  | - having inclined planes of weakness that are slick and glossy in appearance.                           |
| Fissured      | - containing shrinkage cracks, frequently filled with fine sand or silt; usually more or less vertical. |
| Laminated     | - composed of thin layers of varying colour and texture.  |
| Interbedded   | - composed of alternate layers of different soil types.   |
| Calcareous    | - containing appreciable quantities of calcium carbonate.   |
| Well Graded   | - having wide range in grain sizes and substantial amounts of intermediate particle sizes.              |
| Poorly graded | - predominantly of one grain size, or having a range of sizes with some intermediate size missing.      |

## ROCK DESCRIPTION TERMS USED ON BOREHOLE LOGS

### ESTIMATED MECHANICAL STRENGTH

TERM	UNCONFINED COMPRESSIVE STRENGTH
Very Low Strength	1 to 4 MPa
Low Strength	4 to 15 MPa
Medium Strength	15 to 50 MPa
High Strength	50 to 200 MPa
Very High Strength	More than 200 MPa

### GRAIN SIZE

NON-CARBONATE DETRITAL SEDIMENTARY ROCKS		GRAIN SIZE
Conglomerate or Breccia	Very Coarse Grained	More than 80 mm
Conglomerate or Breccia	Coarse Grained	4 to 80 mm
Sandstone <sup>1</sup>	Medium Grained	80 µm to 4 mm
FISSILE	NON-FISSION	
Silt Shale	Siltstone	Fine Grained
Mud Shale	Mudstone	Fine Grained
Clay Shale	Claystone	Very Fine Grained

<sup>1</sup>Sandstone further subdivided where appropriate into fine, medium, coarse

### DISCONTINUITY SPACING

BEDDING	OTHER DISCONTINUITIES	SPACING
Very thickly Bedded	Very Widely Spaced	More than 2 m
Thickly Bedded	Widely Spaced	600 mm to 2 m
Medium Bedded	Moderately Widely Spaced	200 to 600 mm
Thinly Bedded	Closely Spaced	60 to 200 mm
Very Thinly Bedded	Very Closely Spaced	20 to 60 mm
Laminated	Extremely Closely Spaced	6 to 20 mm
Thinly Laminated	Extremely Closely Spaced	2 to 6 mm
Fissile	Extremely Closely Spaced	Less than 2 mm

### WEATHERED STATE

TERM	DEGREE
Fresh	No visible signs of weathering
Slightly Weathered	Weathering only on open discontinuity surfaces
Moderately Weathered	Rock mass weathered but not friable
Highly Weathered	Rock mass weathered and partly friable
Completely Weathered	Wholly decomposed but texture and structure preserved
Residual Soil	Original rock texture and structure destroyed

### CORE RECOVERY

TERM	DESCRIPTION
Total Core Recovery	Total recovery expressed as a percentage of run length
Solid Recovery	Solid recovery expressed as a percentage of run length
Rock Quality Designation (RQD)	Sum of lengths of solid core more than 100 mm long expressed as a percentage of run length
Fracture Index (FI)	Number of breaks per metre of solid core (FI's in excess of 30 denoted as 30+)

### ROCK QUALITY

TERM	RQD
Very Poor Quality	0 to 25
Poor Quality	25 to 50
Fair Quality	50 to 75
Good Quality	75 to 90
Excellent Quality	90 to 100

## NOTES

- The use of cm<sup>2</sup> and cm<sup>3</sup> for area and volume is permissible.
- To convert mass density (ρ) to weight per unit volume use  $F = mg$ , i.e.,  $1\text{Mg}/\text{m}^3 = 9.807 \text{m/s}^2 \cdot 9.807 \frac{\text{Mg}}{\text{s}^2 \cdot \text{m}^3} = 9.807 \frac{\text{kN}}{\text{m}^3}$ . kg/m<sup>3</sup> is not a valid SI density unit.
- The inverse of the coefficient of heat transfer is thermal resistance or the 'R' value.
- kg/m<sup>2</sup> is not a valid SI stress unit.
- Hydraulic conductivity is a proportionality coefficient defined in Darcy's Law  $v = k_w \frac{dh}{ds}$  where v = velocity of flow,  $\frac{dh}{ds}$  = hydraulic gradient.
- All conversion factors have been rounded to four significant figures.

---

**APPENDIX C**

**DISKETTES AND INSTALLATION INSTRUCTIONS**

The report catalogue database and ESEBase files have been stored on 2 diskettes using a compressed format (using MWBACKUP, ZIP2EXE, and PKZIP). These files will need at least 4.45 MBytes after expansion, and an additional 0.64 MBytes for the index files which will be created by the program. To restore the files onto a hard drive (for example, C:\), follow these steps:

1. Start MicroSoft Backup for Windows.
2. Retrieve the catalog for the backup from the last disk of the backup set. The catalog file is called "CC40615A".
3. Restore the backup set. This restores the executable files created from the pkzip and zip2exe backup operation. The files restored are:

c:\tuktuk.bat	
c:\tuktoyak\reports.exe	(report catalog)
c:\esibase\tuk94inc\tuk94inc.exe	(borehole logs from "INAC" database)
c:\esibase\tuk94mac\tuk94mac.exe	(logs from "MACKENZI" database)
c:\esibase\tuk94new\tuk94new.exe	(new borehole logs)
c:\eseb Beau\eseb Beau.exe	(Beaufort Sea ESEBase program)
c:\eseb Beau\drivers\esedriv.exe	(drivers)
c:\eseb Beau\demo\esedemo.exe	(demo database)
c:\eseb Beau\newbase\esenew.exe	(newbase database)
c:\eseb Beau\tuk94bft\tuk94bft.exe	(Beaufort Sea borehole logs)

Exit from the backup program.

4. To expand the compressed files, use the Windows program manager to run file "c:\tuktuk.bat". This will run the executable files, expanding the program and database files, and deleting each executable file upon completion.
5. In Windows, the user should ensure that an icon is set up for both versions of ESEBase (Mackenzie and Beaufort Sea). After the files are expanded, ESEBase can be started. The borehole databases will be reindexed the first time they are used. DBase IV can be used to view and edit the report catalogue in directory "tuktoyak". The "TUK94IN" database is sorted in order of year, month, and study number. R&R XBase can be used to print entries or a summary.
6. The following page shows a directory listing of the program, database, and index files created. (The printout also shows the executable and batch files.)
